Ǧabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

[Latitude/Longitude: 33.311133 / 37.354389]
Ǧabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to

have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

C 78 (Dunand 1373 a)

l bʿnh

By Bʿnh

Provenance:
Ǧabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Ǧabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

C 97, 96 (Dunand 1383 e; Dunand 1383 d)

l nmr bn s¹ʿd bn s¹bʿl bn ḥyn bn {ʾ}ḫwf [[]][[]] [[]][[]] bn flṭ bn ʾs¹d bn bwk bn ʿrs¹ bn ʿwḏ bn whbʾl w wgm ʿl- ḥbb w ʿl- ḥbb w ʿl- ḥbb w ḥbb w ḥbb w drg l- h- ʿky f ʾs²rq b- h- ʾbl w ts²wq f h lt s¹lm w h ʾlt ʾs¹s¹ nqʾt l- ḏ yʿwr h- s¹fr

By Nmr son of S¹ʿd son of S¹bʿl son of Ḥyn son of {ʾḫwf} [[]][[]] [[]][[]] son of Flṭ son of ʾs¹d son of Bwk son of ʿrs¹ son of Whbʾl and he grieved for [one] friend and for [another] friend, and for [another] friend, and [another] friend, and [another] friend, and they succumbed to a strong fever; then he migrated to the inner desert with the camels and felt much longing, so, O Lt, may he be secure, and O goddess of ʾs¹s¹, may he who would efface this inscription be thrown out of his grave.

Apparatus Criticus:
C read this as two separate inscriptions (C 96 and 97):

TEXT

C 96: *l nʿm bn flṭ bn ʾ{ʾ}{s¹}d bn bwk bn ʿrs¹ bnʿwḏ bn whbʾl- w wʿm ʿl ḥbb w ʿl- ḥbb w ʿl- ḥbb*
C 97: l mr bn s¹ʿd bn s¹bʿʾl bn ḥyn bn ʾḫw(f) w ḥbb w ḥbb w rʿ{y} h- ʿky f ʾs²rq b- h- ʾbl w ts²wq f h lt <> s¹lm w h ʾlt w ʾs¹s¹ nqʾt l- ḏ ʿwr h s¹fr

TRANSLATION
C 96: 'and greetings for Ḥbb and for Ḥbb and for Ḥbb'
C 97: 'and he pastured the sheep. And he migrated towards the east with the camels. And he was filled with longing. And, O Lt safety. And, O ʾlt, punish him who may destroy the inscription'

Commentary:
Dunand's copy, from which C was working, does not show accurately the relative positions of the inscriptions on this rock and so there was no way that the editor of C could have realised that C 97 and 96 were one text. However, on Robert Hoyland's photograph, shown here, it is clear that 96 is the continuation of 97 and that here has been an attempt to erase the words *bn ʿm* between *{ʾ}ḫwf* and *bn flṭ*. Parts of this genealogy can be found in a number of other inscriptions (C 97+96, 1534, 2025, 2732, 2779, 2787, 4959, LP 697, 713, 1156, KRS 201, 260) and it is clear from all these that the pivotal point in this lineage is formed by *bwk bn ʿrs¹*. All the genealogies go back to this point and only one (SSWS 200) takes it further back, to *ʿwḏ bn gnʾl bn ʿly*. This shows that the lineage is part of the *ʾl ʿwḏ* , one of the two large lineage groups known from the Safaitic inscriptions, both of which take their genealogy back to *whbʾl*. It is particularly interesting that C 97+96 telescopes the generations between the pivotal point and the ultimate 'ancestor' by ending the genealogy with *bwk bn ʿrs¹ bn ʿwḏ bn whbʾl* (cf. KRS 260 where the author ends his genealogy with *bwk bn ʿrs¹ bn whbʾl*) It is also interesting the author of C 97+96 appears to have carved *bn ʿm* in the wrong place in the genealogy. He placed it after *ʾḫwf* whereas C 2025 would suggest that its correct position was before *ʾḫwf*. It is therefore possible that the author himself erased it. One final note on the genealogy: the names *ʾs¹d* and *ʾʾs¹d*, and *flṭ* and *ʾflṭ* occur consistently in different strands of the genealogy, and it is clear that the shorter forms are not errors for the longer ones. For the translation of *w drg l- h- ·ky* see Al-Jallad 2015: 228, 302, 310, which was written before the study of the photograph showed that C 97 and 96 were one inscription. *ʾlt ʾs¹s¹* is the tutelary goddess of Usays, the ancient and mediaeval name of Ǧabal Says where this inscription was found. The place name *ʾs¹s¹* recurs in C 22 and the deity *ʾlt ʾs¹s¹* in C 101. See MISS 466-467, and 474–475 on these tutelary deities of places.

Provenance:
Ǧabal Says, unspecified region, unspecified country.

Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

C 101 (Dunand 1383 i)

l nf h ʾlt ʾs¹s¹ nqmt m- ḏ ʾs¹lf w ʿwr {l-} {ḏ} {y}ʿw{r}

By Nf O goddess of ʾs¹s¹ [grant] vengeance on him whose actions require vengeance and [inflict] blindness {upon him who effaces}

Apparatus Criticus:
C: "take revenge on him who might strike (this inscription) out" for [grant] vengeance on him whose actions require vengeance

Provenance:
Ǧabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Ǧabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic

inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

C 296 (Dunand 1388 a)

l s¹ʿdn bn wdm w ṣyr m- mdbr

By S¹ʿdn son of Wdm and he returned to permanent water from the inner desert

Provenance:
Ǧabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Ǧabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. However, this is probably because none of them seems to have climbed to the top of the inner crater, where von Oppenheim (1899–1900: i, 245), reported large numbers of inscriptions on the south-east slope of the inner crater and particularly on its summit, though he did not record any. C 5–104 were copied at Ǧabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts have been found on this section of the rim by later expeditions, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ǧabal Says and Zalaf."

C: l ms¹k bn ks¹ṭ bn ms¹k ḏ- ʾl ʿḏl w s¹rt mʿ ʾḥrb

Provenance:
"In the area between Ǧabal Says and Zalaf", Rif Dimashq, Syria
This is a large area including most of the Ruḥbah and the eastern edge of the Ṣafā. Unfortunately C does not supply any further information on the provenance of this inscription and, to the best of our knowledge, the area has not been revisited. However note that C 296–298 were rediscovered on the summit of Ǧabal Says.

l mzkr bn ʿs^{1}m w n[ẓ]r

By Mzkr son of ʿs^{1}m and he looked around

Apparatus Criticus:
C: l mzkr bn ʿs^{1}m w nẓr

Provenance:
Tall Ghurāb or Ǧabal Ghurāb al-Ḥaddālī, Rif Dimashq, Syria
[Latitude/Longitude: 33.149508 / 37.78625]
The co-ordinates are from http://www.geonames.org/. This site has not been revisited. According to Wetzstein (1860: Map), the it is "*c.* 10–12 hours on horseback [due east] of Ruǧm al-Marʾah". Based on the measures of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which are the same as those given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour

for ordinary going..." (Butler, Norris & Stoever 1930: vii), this would place Tall Ghurāb approximately 44–53 km [due east] of Ruǧm al-Mar'ah. Wetzstein does not seem to have copied any inscriptions at Tall Ghurāb.

References:
Butler, H.C., Norris, F.A., Stoever, E.R. *Geography and Itinerary*. Syria: Publications of the Princeton University, Archaeological Expeditions to Syria in 1904-1905 (Division I, Section A: by E.R. Stoever from the notes and journal of F.A. Norris) and 1909 (Division I, Section B: by H.C. Butler). Leiden: Brill, 1930.

The co-ordinates are from http://www.geonames.org/. This site has not been revisited. According to Wetzstein (1860: Map), the it is "*c.* 10–12 hours on horseback [due east] of Ruǧm al-Mar'ah". Based on the measures of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which are the same as those given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), this would place Tall Ghurāb approximately 44–53 km [due east] of Ruǧm al-Mar'ah. Wetzstein does not seem to have copied any inscriptions at Tall Ghurāb.

l {m}ḥrb bn tġḍr ḏ- ʾl ʾnḥ {g}{ḍ}mʿ

By {Mḥrb} son of tġḍr of the lineage of ʾnḥ gḍmʿ

Apparatus Criticus:
MISS p. 474: mentions tġḍr.

Last name v d

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east,

and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

C 379 (Vogüé 36)

{l} {k}{ʿ}mh bn ʾʾs¹d

{By} {Kʿmh} son of ʾʾs¹d

Apparatus Criticus:
C: l kʿmh bn ʾʾs¹d

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

C 388 (Vogüé 46 a)

l s²rb bn {ṣ}ʾr bn ʾhwd

By S²rb son of {Ṣʾr} son of ʾhwd

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot

1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

C 397 (Wetzstein 15; Vogüé 53 a)

l qmr bn {ʿ}{l}f bn qrml bn ġlm

By Qmr son of ʿlf son of Qrml son of Ġlm

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

C 434 (Dussaud V 19)

l ʾnʿm bn mhl w nẓr

By ʾnʿm son of Mhl and Nẓr

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the *ḥarrah* stretches for *c*. 10-20 km with several *qīʿān* (singular *qāʿ*) before giving way to the *ḥamād*. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west. side. On the south, there is a very large grave (*c*. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Ǧabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say *w nẓr* ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Mārrah.

C 438 (Vogüé 131; Dussaud V 170; Dunand 1036)

l s²rbb bn nġft bn ʾly

By S²rbb son of Nġft son of ʾly

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

l s²br bn ẓ{n}n

By S²br son of Ẓnn

Apparatus Criticus:
C: l s²br bn ẓʿn

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 473.1 (Dunand 929)

l s¹f bn zml

By S¹f son of Zml

Apparatus Criticus:
JSafN p. 103 = Dn 929]

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 514 (Vogüé 193)

l ġll bn rml

By Ġll son of Rml

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

l ḃnt bn ʿdd

By Ḃnt son of ʿdd

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in

the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 543 (Dunand 922 c)

l s²{k}{l} bn ms²ʿr

By S²kl son of Ms²ʿr

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 586 (Wetzstein 131; Vogüé 127)

l ymlk bn ṣf{w}n bn ʾtm [b]n tʾm bn rṯʾl w wgm ʿl- rms¹ w ʿl- ḥd w r{ʿ}y f h lt ġnyt {w} dṯ{ʿ} f h s²ʿhqm [n]qm m-s²nʾ ----m----ṣk bn ḥwr ḫṭr

By Ymlk son of Ṣfwn son of ʾtm son of Tʾm son of Rṯʾl and he mourned for Rms¹ and for Ḥd and he pastured and O Lt [grant] abundance and he spent the season of the latter rains and O S²ʿhqm [grant] vengeance from enemies ---- son of Ḥwr in danger.

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 602 (Dussaud V 155)

[l] [r]{f}n bn hnʾ

By Rfn son of Hnʾ

Apparatus Criticus:
C: [l] rs^{2}n bn hnʾ

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 619 (Dussaud V 179 b)

l ʾflṭ [b]n s²bn w m----

By ʾflṭ {son of} S²bn and ----

Apparatus Criticus:
C: *[b][n]* for *[b]n*

Provenance:
The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

C 633 (Dunand 1095)

l ʾnʿm bn ḫlṣ

By ʾnʿm son of Ḫlṣ

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

References:

l grmʾl bn ṣhl

By Grmʾl son of Ṣhl

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

C 652 (Dunand 1104 b)

l ṭd bn khlt bn bdḥ w rʿy h- nḫl

By Ṭd son of Khlt son of Bdḥ and he pastured the valley

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

By S^1r son of Nẓr son of Ṣhyn son of Gʿl son of Rs^1l and he escaped from Rm in the year that those of the lineage of Rhy contended against Nbṭ in a plot (?) and O Lt [grant] security and vengeance on whomsoever scratches out the inscription.

Apparatus Criticus:
MNH p. 329 and n. 172: w nfr m- rm - and he escaped from Rm. MNBS 111 n. 68: on Knauf and texts mentioning conflicts between the Nabataeans aand other peoples.

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west

of Ruǧm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruǧm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuǧayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

l hmʿḏ bn nh{g}

By Hmʿḏ son of Nhg

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

C 794 (Dunand 1174)

l ʾḫḏ bn ḫdg

By ʾḫḏ son of Ḫdg

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

By Yʿll son of S²br son of Rs¹l

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

l qḥ bn ʾg w qʾ

By Qḥ son of ʾg and *qʾ*

Apparatus Criticus:
C: *qʾ[t]* "reven[ge]" for *qʾ*

Provenance:
Ḥağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Marʾah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Marʾah, but this can only be a very approximate position. Note that this site is not the same as Ḥuğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

rmmt bn {ṯ}t----

Provenance:
A cairn north of Khirbat al-Umbāshī, Al-Suwaydah, Syria
[Latitude/Longitude: 33.06268 / 36.97072]
Khirbat al-Umbāshī is a site on an "island" in a wadi, with settlements dating mostly from the second half of the third millennium to the early second millennium BC. In addition there are two large cemeteries to the east and south-west with over 1000 megalithic tombs (see Braemer, Echallier & Taraqji 1993). It is at the northern extremity of the Kraa (al-Qaraʾah) and about 30 km from nearest villages on Ǧabal al-ʿArab. The cairn where these inscriptions were copied has not been rediscovered.

[Latitude/Longitude: 33.06268 / 36.97072]
Khirbat al-Umbāshī is a site on an "island" in a wadi, with settlements dating mostly from the second half of the third millennium to the early second millennium BC. In addition there are two large cemeteries to the east and south-west with over 1000 megalithic tombs (see Braemer, Echallier & Taraqji 1993). It is at the northern extremity of the Kraa (al-Qaraʾah) and about 30 km from nearest villages on Ǧabal al-ʿArab. The cairn where these inscriptions were copied has not been rediscovered.

A cairn north of Khirbat al-Umbāshī, Al-Suwaydah, Syria
[Latitude/Longitude: 33.06268 / 36.97072]
Khirbat al-Umbāshī is a site on an "island" in a wadi, with settlements dating mostly from the second half of the third millennium to the early second millennium BC. In addition there are two large cemeteries to the east and south-west with over 1000 megalithic tombs (see Braemer, Echallier & Taraqji 1993). It is at the northern extremity of the Kraa (al-Qaraʾah) and about 30 km from nearest villages on Ǧabal al-ʿArab. The cairn where these inscriptions were copied has not been rediscovered.

C 888 (Dussaud V 412)

l qdm bn mnʿm bn brd bn ġyrʾl

By Qdm son of Mnʿm son of Brd son of Ġyrʾl

Provenance:
Between Khirbat al-Umbāshī and Ǧabal al-ʿArab (Ǧabal al-Drūz), Al-Suwaydah, Syria
C wrongly placed this text with those from the cairn north of Khirbat al-Umbāshī. However, it is clear from Dussaud & Macler 1901: 121 that it was not copied there (even if their "Nebech" = Umbāshī) but "1 hour and 25 minutes further" "on the track which leads to the Ǧabal al-Drūz". They did not copy any of the texts at the cairn they found near Khirbat al-Nebech.

l nʿg bn ḥmlt

By Nʿg son of Ḥmlt

Apparatus Criticus:
C: l nʿg bn ḥm(y)t

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 953 (Vogüé 78 c)

l {ʿ}rb

By ʿrb

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 969 (Vogüé 90 b)

l ḥmyt bn bnn

By Ḥmyt son of Bnn

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 984 (Vogüé 102)

l qdm bn y{ʿ}l[y]

By Qdm son of Yʿly

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 999 (Waddington 77 a; Vogüé 113 b)

l btn bn s²{r}{k}

By Btl son of {S²rk}

Apparatus Criticus:
C: *btl* for *btn*; *s²rk* for *s²{r}{k}*

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 1031 (Waddington 50)

---- *bn ġlm ḥmy[t]*

---- son of Ġlm Ḥmyt

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 1061 (Vogüé 219 B)

l s¹b{ḥ} bn hḏ{r}

By S¹bḥ son of Hḏr

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 1074 (Wetzstein 147)

l (ẓ)nn bn drʾ[l] bn ʾs²ym bn drʾl w d{ṯ}ʾ h- d[r]

By {Ẓnn} son of {Drʾl} son of ʾs²ym son of Drʾl and {he spent the season of later rains} {here}

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

l ʿlh b(n) qfl ----

By ʿlh {son of} Qfl

Apparatus Criticus:
Jamme 1971: 3: *l gl s¹by qfly* "By Gl. He has made Qfly prisoner."

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 1127 (Vogüé 212)

l ʿbdg{d} bn ns²bt h- {f}rs¹

By {ʿbdgd} son of Ns²bt is {the horse}

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1141 (Vogüé 224)

l whbʾl bn (ṣ)bḥ bn s¹ʿd w----

By Whbʾl son of {Ṣbḥ} son of S¹ʿd and

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain

the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1155 (Vogüé 235 a)

l s¹ny bn ḫl'[l]

By S¹ny son of Ḫl'l

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and

Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1183 (Vogüé 388 b; Waddington 163 b)

l ḫdmt bn ḥbs¹ bn ml{y}[t]

By Ḫdmt son of Ḥbs¹ son of Mlyt

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact

that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1186 (Vogüé 389 b)

l (m)ty bn s¹l bn mty bn ʿ(l)y ḏ---- f h gdʿwḏ s¹l(m) w l- -h h- mhrt yrbb -h (w) dmy l- -h s²m(t) w {h} lt l- ʾḫl w wk(s¹) w ḫrs¹ w ʿrg w ʿwr l- mn ḫbl

By {Mty} son of S¹l son of Mty son of {ʿly} of ---- and so O Gdʿwḏ [grant] security and to him [Mty] belongs the filly which he is training {and} {S²mt} drew [the picture] for him and {O} Lt let there be indeed failure and loss and dumbness and lameness and blindness on whoever obscures [the drawing and inscription]

Apparatus Criticus:
C: *s¹n* for *s¹l*; *yr----h w dmy f h s²m(s¹)* "---- and he drew and O S²m(s¹)" for *yrbb -h (w) dmy l- -h s²m(t)* "which he is training and S²mt drew for him";

Commentary:
The section of the text beginning *f h gdʿwḏ* is not connected to the section ending *ʿ(l)y ḏ* ----, but runs parallel with it and it is impossible that it belongs to C 1187. The translation here of the section *w l- -h h- mhrt yrbb -h (w) dmy l- -h s²m(t)* was first proposed in Macdonald 1996: 74. There are other examples in Safaitic of asyndetic relative clauses following defined antecedents, a feature which also occurs in early Classical Arabic (Beeston 1970: 50, note 1). See Al-Jallad 2015: 188 for a discussion of this and other examples. For another inscription in which the author records that someone drew a picture for him see LP 325. Note that C 1188 which starts between the front legs of the camel and runs across C 1186 is by S²mt bn Mdʿ and is probably the artist's signature. The curse is one of the longest in the Safaitic inscriptions. The *{h}* in *w {h} lt* is entangled with the second *bn* of C 1188. On the asseverative *l-* before *ʾḫl* see Al-Jallad 2015: 160–161. We would suggest that *ʾḫl* is the verbal noun of the IV (*afʿala*) form of *ḫalla* "he fell short of accomplishing what he ought to have done" (Lane 778c), though for another possibility see Al-Jallad 205: 320. Following Al-Jallad 2015: 352 we would take as *wk(s¹)* as meaning "loss". The remaining afflictions are well attested in Safaitic.

Provenance:
Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the

C 1187 (Vogüé 389 c; Waddington 189 c)

[l] ʿqrb bn m[d][ʿ]} bn s²m[t] [b][n] ḫ{l}ʾl w ḥll h- [d][r] w d(ṯ)ʾ h- w(r)d b- s¹lṭ

{By} ʿqrb son of {Mdʿ} son of [S²mt] [son of] {Ḫlʾl} and he camped in this place and spent the season of the later rains at this watering hole in S¹lṭ.

Apparatus Criticus:
C: *l* for *[l]*;

Commentary:
C's reading is taken from Waddington's copy but it is difficult to reconcile this with de Vogüé's, both in terms of the lay-out and the letters. Waddington 189 was never fully published. It does not appear at all in Ryckmans G 1939, and only inscriptions 189 c and e are published in C, and in the text rather than on the plates. The reason fro this is not explained. In this chaotic situation we have followed C in taking the reading from Waddington's copy with occasional "corrections" from de Vogüé's, but it should be noted that it is extremely uncertain. De Vogüé's copy shows that the *l* before the first name is the last latter of C 1186. There is a small curved mark above the ʿ of *ʿqrb* but this cannot be a *lām auctoris*. The arrangement on de Vogüé's copy suggests that the major part of the C 1186 beginning *f h gdʿwḏ* ... may well belong to this text rather than to C 1186, though it was not apparently copied as such by Waddington. So, given the uncertainties about C 1187, it seems safer to retain C's arrangement until such as time as the stone can be rediscovered.

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]

Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1247 (Wetzstein 52; W.Tafel II, 1.a [?])

l ʾḥlm bn s¹ʿd bn lʿṯmn w wgm ʿ{l}- mṭr w ḥll h- dr

By ʾḥlm son of S¹ʿd son of Lʿṯmn and he grieved {for} Mṭr and camped here

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. C 1274 (Wetzstein 160; W. Tafel I, I.b)

l mṭr bn mṭr bn yʿly bn grm bn s¹ʿq w wgm ʿl- ḫlṣ w ʿl- mṭ{r}

By Mṭr son of Mṭr son of Yʿly son of Grm son of S¹ʿq and he grieved for Ḫlṣ and for {Mṭr}

Apparatus Criticus:
C: *s¹ʿd* for *s¹ʿq*; *ḫl -h* for *ḫlṣ*

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. [Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1324.1 (Dussaud V 51 bis)

lh----

By H----

Apparatus Criticus:
C takes it as two texts: 1 *lh* 2. *l ẓʿn ?*

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey

Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

By Ḥml {son of} {Ns^{2}bt} son of Ktm and he [pastured] the camels during the rising of Aquarius on {fresh herbage}.

Apparatus Criticus:
C: l ḥml b{n} [n]s^{2}bt bn ktm w r[ʿ]y h- ʾbl b- rʾ ḏkr b- q{l}

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.
