C 3835 (Dussaud M 357; LP 131)

l ʾbgr bn ys¹lm

By ʾbgr son of Ys^{1}lm

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3844 (Dussaud M 367; LP 126)

l bs¹ʾ bn gml

By Bs¹ʾ son of Gml

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3856 (Dussaud M 379; LP 808 [?])

l gʾnt bn ẓnn

By Gʾnt son of Ẓnn

Apparatus Criticus:
l ghnt bn ẓnn [LP]

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3858 (Dussaud M 381; LSI 78)

l ḥrb bn b's^1h

By Ḥrb son of B's^1h

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3876 (Dussaud M 398; LSI 80)

l wdʿ bn nġbr

By Wdʿ son of Nġbr

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3881 (LSI 7 a)

l ʿd

By ʿd

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the

escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu'azzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places

it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3932 (LSI 134 bis)

l dn(ʾ)(l)

By Dnʾl

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. l wdm bn s¹ʿ(d) bn ʾ[l]w[h]b

By Wdm son of S¹ʿd son of ʾlwhb

Provenance:
"Kawm al-Wāsim" (C p. 500), Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The word *kawm* means "a mound, or small hill" and Kawm al-Wāsim is just such a mound, about 1.8 km north-east of the village, on the right bank of the Wādī Ishbikkī. It is surmounted by a large circular structure (approx. 15 m in diameter) built of rough, apparently Cyclopaean, masonry. The Safaitic inscriptions are carved on the blocks in situ — suggesting that they postdate the abandonment of the building — and on the rocks of a natural platform overlooking the wadi.

l qdmʾl bn w---- h ʾ{l}(t) nqmt

By Qdmʾl son of W---- [and] O ʾlt [grant] revenge [on whoever scratches out the inscription]

Provenance:
"Kawm al-Wāsim" (C p. 500), Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The word *kawm* means "a mound, or small hill" and Kawm al-Wāsim is just such a mound, about 1.8 km north-east of the village, on the right bank of the Wādī Ishbikkī. It is surmounted by a large circular structure (approx. 15 m in diameter) built of rough, apparently Cyclopaean, masonry. The Safaitic inscriptions are carved on the blocks in situ — suggesting that they postdate the abandonment of the building — and on the rocks of a natural platform overlooking the wadi.

By Ṣʿd son of B---- {son of} ʿlg

Provenance:
The spring at al-Wāsim (Dussaud & Macler 1903: 28 [430]), Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikkī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a "step" in the bed creating a "waterfall" about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

At a point where the wadi narrows, there is a "step" in the bed creating a "waterfall" about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

C 4010 (Dussaud M 854)

l s²ddt bn ṣbḥ bn s¹ḥly bn hr [w] [t]ẓ[r] h- {s¹}my w h lt r{w}ḥ m- ḏ bʾs¹ -h

By S²ddt son of Ṣbḥ son of S¹ḥly son of Hr [and] [he awaited] the {rains}, so, O Lt, let there be ease from that which has made him miserable.

Apparatus Criticus:
C: "m- ḏ- bʾ{s¹} {-h}"

Provenance:
The spring at al-Wāsim (Dussaud & Macler 1903: 28 [430]), Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikkī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a "step" in the bed creating a "waterfall" about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the

immediate vicinity of the wadi bed but slightly higher.

C 4025 (Dussaud M 869)

l ʾs¹(d) bn ʾs¹(d)

By ʾs¹d son of ʾs¹d

Provenance:
Qalʿat al-Wāsim (Dussaud & Macler 1903: 28 [430]), Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. Qalʿat al-Wāsim is a large cairn between Kawm al-Wāsim and the spring in the Wādī Ishbikkī (see the notes under C 4024). Dussaud & Macler describe it as a "watch-tower". Note that they distinguish between Kawm al-Wāsim (which is surmounted by a large circular structure which they describe as "some ruins") and Qalʿat al-Wāsim.

[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ǧabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. Qalʿat al-Wāsim is a large cairn between Kawm al-Wāsim and the spring in the Wādī Ishbikkī (see the notes under C 4024). Dussaud & Macler describe it as a "watch-tower". Note that they distinguish between Kawm al-Wāsim (which is surmounted by a large circular structure which they describe as "some ruins") and Qalʿat al-Wāsim.

C 4196 (Mascle-Mouterde 1)

l {g}rmʾ{l} bn gr{m}{ʾ}{l} bn bḥṯ{n} dmy

By {Grmʾl} son of {Grmʾl} son of Bḥṯn he drew

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.7161 / 36.9315]
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

C 4204 (Mascle-Mouterde 9)

l qtl bn s²ṣw

By Qtl son of S²ṣw

Apparatus Criticus:

C: *fny* for *s²ṣw*
Jamme 1971: 27: *s²ṣw*

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.7161 / 36.9315]
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

C 4227 (Mascle-Mouterde 29)

l tm {b}n ʾb{l}{m}

By Tm {son of} {ʾblm}

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.7161 / 36.9315]
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of

Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

l ʿbd bn w'lt

By ʿbd son of W'lt

Apparatus Criticus:
C adds: *bn* $s^{2\circ}$*l f h lt nqmt* "and O Lt [grant] vengeance".

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.7161 / 36.9315]
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

C 4247 (Mascle-Mouterde 40)

l {b̈}nt b[n] ʾṣr bn ʿbd (b)(n) wʾ(l)

By {Bnt} {son of} ʾṣr son of ʿbd {son of} {Wʾl}

Apparatus Criticus:
C: *wʾ{l}[t]* for *wʾ(l)*

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.7161 / 36.9315]
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

C 4250 (Dussaud M 1)

l mʾkm

By Mʾkm

Apparatus Criticus:
MNH p. 311 n. 50: on the provenance of the inscription.

Provenance:
Between the village of Hōyyet Ḥibikke and Ghadīr Abū Zaʿrūr, Dussaud & Macler 1903: 26 [428], 83 [485], Al-Suwaydah, Syria
[Latitude/Longitude: 32.5561 / 36.8672]
Dussaud & Macler (1903: 26 [428]) say that they found this, the first Safaitic inscription on this journey, three hours [= 13.2 km, see below] after leaving Hoyyet Ḥibikké. We have been unable to identify this village with any certainty, nor indeed the nearby village of Ḥibikké shown on their map and that of Wetzstein (1860). A small modern town called Al-Hwayyah is in roughly the right position and we have given its co-ordinates above but this is not at all certain. The distance, as the crow flies, between Al-Hwayyah and Ghadīr Abū Zaʿrūr is approximately 22 km which is roughly the distance Dussaud and Macler would have covered in the 4 hours 50 minutes they say their journey took (1903: 26 [428]), according to the measures of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going and three miles per hour on good roads" (Butler, Norris & Stoever 1930: vii).

Latitude: Possibly modern Al-Hwayyah 32.5561; Ghadīr Abū Zaʿrūr 32.71667
Longitude: Possibly modern Al-Hwayyah 36.8672; Ghadīr Abū Zaʿrūr 36.95

l gn bn ṣnṭ

By Gn son of Ṣnṭ

Provenance:
On a series of nameless cairns or small groups of inscriptions in al-Kraa (al-Qaraʾah), Al-Suwaydah, Syria
De Vogüé says that C 4259–4283 were found on isolated stones or in small groups" (1868–1877: 147), during his and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab. This took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā in the north and Wādī al-Gharz on the south and east. During the journey they passed near al-ʿIlimmah (Latitude: approximately 32.8427; Longitude: approximately 37.1935) and south of al-Kusayrah (Latitude 32.93611; Longitude 37.15861 from Geonames). Apart from this we have no indication of their route,

beyond the dotted line on de Vogüé's map (1865).

C 4284 (Vogüé 342)

l ʿwdʾl bn gfft bn m{r}wn w tẓr s²nʾ

By ʿwdʾl son of Gfft son of Mrwn and he was lying in wait for enemies

Provenance:
On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

l ----ḥ bn {ʾ}mn

By Ḥ son of ʾmn

Provenance:
On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris &

Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

Provenance:
On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

C 4319 (Vogüé 372 a)

l ḥr(b) b[n] ʿ{m} bn s¹wd

By Ḥrb son of ʿm son of S¹wd

Apparatus Criticus:
C: l ḥr(b) b[n] ʿg bn s¹wd

Provenance:
On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

By Qn son of Qwm

Provenance:
On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria [Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington's journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

De Vogüé's map (1865) on which this cairn is marked "R" (for *ruǧm*) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the *ḥarrah* given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

l s²dd bn mlkt bn ḫṭs¹t bn flṭt bn ẓf w ḏbḥ l- bʿ{l}s¹mn f wqyt

By S²dd son of Mlkt son of Ḫṭs¹t son of Flṭt son of Ẓf and he sacrificed to {Bʿls¹mn} so, protection

Apparatus Criticus:
C:*f(l)ṭt bn b(h)s²* for *flṭt bn ẓf.*

Commentary:
The reading here is based on the LP 925 copy which, though a mirror-image of Dussaud M 471, clearly represents the same inscription.

Provenance:
Al-Namārah area, Al-Suwaydah, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
According to Dussaud & Macler (1903: 151), this inscription was found between al-Namārah and Ghadīr al-Darb, but according to Littmann (1943: 220) it comes from Al-Namārah. Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 4361 (Dussaud M 472; LP 924)

l lʿ(ṯ)m bn zʾkt bn ʾs¹lm

By Lʿṯm son of Zʾkt son of ʾs¹lm

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4367 (Dussaud M 478; LSI 101)

l s¹ʿd bn bnʾḥd bn kddh

By S¹ʿd son of Bnʾḥd son of Kddh

Apparatus Criticus:
C: l s¹ʿd bn ( ) ʾḥd bn kddh
C believes the bn of the second to be dittography on the basis of the genealogy in C 4362

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

l ʾnʿm bn ẓnn bn s¹(----) w (w)(g){d} ʾṯr mty

By ʾnʿm son of Ẓnn son of {S¹----} and he {found} the traces of Mty

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4381 (Dussaud M 491)

l ʾbs²m bn ġlwn

By ʾbs^{2}m son of Ġlwn

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4405 (Dussaud M 514; LP 917)

l ʿṭs¹ bn zḥk bn ʾlwhb

By ʿṭs¹ son of Zḥk son of ʾlwhb

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads

out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4406 (Dussaud M 515; LP 926)

l s¹hm bn fny bn fn(y) bn qdm bn fn(y) bn ġyr'l w wgm ʿl- 'ḫ -h

By S¹hm son of Fny son of {Fny} son of Qdm son of {Fny} son of Ġyr'l and he grieved for his brother

Commentary:
C identifies Dussaud M 515 with LP 926, although the copies differ considerably in the second half of the text. However, LP 926 is one of the inscriptions copied by one of the "servants of the Princeton University Archaeological Expedition" (Littmann 1943: iii), who would not have known Safaitic, and this may explain the differences.

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4408 (Dussaud M 516; LP 895; Mr.A 9)

l mġyr b{n} {ʿ}{ḏ} bn {ʿ}ḏ bn ġṯ bn {t}{ʾ}{m} bn s¹r bn {ʾ}s²ḥ {w} ḫrṣ ʾḫw -h f h lt s¹lm l- ḏ ḫrṣ {w} {ʿ}wr l- ḏ y{ʿ}wr

By Mġyr son of {ʿḏ} son of ʿḏ son of Ġṯ son of {Tʾm} son of S¹r son of {ʾs²ḥ} {and} he was on the look out for his brothers (he missed his brothers). So, O Lt [grant] security to whoever keeps watch and blindness to whoever scratches out the inscription

Apparatus Criticus:
C: *(w)(d)m* for *{t}{ʾ}{m}*; *(ṣ)(b)ḥ* for *{ʾ}s²ḥ*; *ʾḫ( ) -h* for *ʾḫw -h*; *ḫr(ṣ) [w] [ʿ][w]r l- ḏ y[ʿ]wr* for *ḫrṣ {w} {ʿ}wr l- ḏ y{ʿ}wr*

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4414 (Dussaud M 523)

l ʾ(n)hb bn s¹d

By ʾnhb son of S¹d

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of

the southern three mounds, and most were concentrated at its eastern end.

C 4421 (Dussaud M 530; LSI 96)

l ʾs¹ bn s¹ʿd

By ʾs¹ son of S¹ʿd

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4435 (Dussaud M 543)

l ḥnʾl bn ḥnʾl w (r)ʿ(y)

By Ḥnʾl son of Ḥnʾl and {he pastured}

Provenance:

Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4448 (Dussaud M 554)

l mḥwr bn ġṭfn bn ʾḏnt w ṣyr b- ġnmt -h s¹nt ḥrb h- mḏy ʾl rm b- bṣr{y} qṭrz

By Mḥwr son of Ġṭfn son of ʾḏnt and he returned to a place of water with his goats the year the Persians waged war upon the people of Rome at {Bṣry} qṭrz

Apparatus Criticus:
MNH p. 331 and n. 180: s¹nt ḥrb h- mḏy ʾl rm b- bṣr(y) qṭrz - the year the Persians fought the ʾl Rm at Boṣra. The last four letters remain inexplicable. See Knauf ZDMG 134 1984 for a list of different identifications of the Persians at Boṣra. Also MNH p. 334. MNBS p. 112: on Knauf and the interpretation of ḥrb.
C: l mḥwr bn ġṭfn bn ʾḏnt w ṣyr b- ġnmt -h s¹nt ḥrb h- mḏy ʾl rm b- bṣr ṣqṭ (b)z

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4462 (Dussaud M 568)

l ʾs¹ b(n) (s¹)ʿ{d}

By ʾs¹ son of S¹ʿd

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4540 (Dussaud M 643)

l bḏy' bn bnn bn glḥ

By Bḏy' son of Bnn son of Glḥ

Apparatus Criticus:
C: l b(ḏ)lh bn bn(y) bn glḥ

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4555 (Dussaud M 658)

l ʾnʿm bn mhrʿ

By ʾnʿm son of Mhrʿ

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4558 (LSI 95)

l ʾlh bn bʾḫh bn trb

By ʾlh son of Bʾḫh son of Trb

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]

Al-Mrōshan consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4676 (Dussaud M 757)

l ġnṯ bn bs¹ʾ

By Ġnṯ son of Bs¹ʾ

Provenance:
Ghadīr al-Darb, Al-Suwaydah, Syria
[Latitude/Longitude: 32.8333 / 37.0667]
Dussaud & Macler describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). The co-ordinates given above are those provided by Geonames, but this places it some 220 m north of the left bank of the wadi, so they should be taken as approximate.

C 4677 (Dunand 887 a)

l ks¹ṭ bn rnḥ bn ʿlq w dṯʾ h- ʿrḍ s¹nt {ḥ}w(r) ʾl yẓr

By Ks¹ṭ son of Rnḥ son of ʿlq and he spent the season of later rains on the side of this valley the year the ʾl Yẓr {returned}

Apparatus Criticus:
C: *ḥwl ʾl yẓr* "ʾl Yẓr migrated" for *{ḥ}w(r) ʾl yẓr* "ʾl Yẓr {returned}".

Commentary:
It is difficult to see how C achieved his interpretation of *hwl* as "migrated". The reading and interpretation here are offered tentatively.

Provenance:
On the left bank of Wādī al-Gharz, beside the track leading from Damascus to the Ruḥbah (C p. 579), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where along this track on the left bank of Wādī al-Gharz these inscriptions were found.

C 4717 (Dunand 925)

l ḫyḏt bn ḫbṯ bn s¹m(k) bn s¹wr bn mlk w rʿy h- nḫl bql w ngʿ b- ry s¹rqt f h bʿls¹m[n] {ġ}n(y)t

By Ḫyḏt son of {Ḫbṯ son of {S¹mk} son of S¹wr son of Mlk and he pastured the valley on spring herbage which was wholesome because it was well-watered *s¹rqt* and so O {Bʿls¹mn} [grant] {abundance}

Apparatus Criticus:
C: *b- ql* "in scarcity" for "spring herbage"; *ngʿ* b- ry srqt "he wept because the land was watered : he was plundered [?]" for "which was wholesome because it was well-watered *s¹rqt*"

Commentary:
The verb *ngʿ* has several meanings in Safaitic. Here, it seems to refer to the quality of the pasture, compare Classical Arabic *naǧaʿa* "to be wholesome, beneficial [food]" (Hava p. 752a). Here we would suggest it is in a circumstance clause refering to the clause *rʿy h- nḫl bql*. The phrase *b-ry* would then give the reason it was beneficial, compare Classical Arabic *riyy* "[in relation to plants herbage, or to trees] the state of having plentiful irrigation...." (Lane 1195c]. We are unable to suggest a meaning for *s¹rqt* here.

Provenance:
On the left bank of Wādī al-Gharz, beside the track leading from Damascus to the Ruḥbah (C p. 579), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where along this track on the left bank of Wādī al-Gharz these inscriptions were found.

C 4718 (Dunand 926)

(----){y}{b} w nṣḥ (h-) dqr

---- and may the planting be well watered

Apparatus Criticus:
C: *w ns^{1}ḥ l-dqr* "and abundant irrigation for a garden" for "and may the planting be well watered"

Commentary:
The inscription shown on this copy is too fragmentary to allow any interpretation to be offered with confidence (see Macdonald 2009: I, 317, n. 96). If this interpretation is correct, the planting could refer either to opportunistic sowing of grain in the desert (see Macdonald 2009: I, 316–318, and n. 106). It is worth noting that this text was reputedly found at the point where the Wādī al-Gharz douches into the Ruḥbah, a large alluvial plain which is the largest area in the *ḥarrah* for opportunistic agriculture. Nevertheless, it should be stressed that, while this interpretation may be possible, given the problematic copy, it can be no more than a suggestion.

Provenance:
On the left bank of Wādī al-Gharz, beside the track leading from Damascus to the Ruḥbah (C p. 579), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where along this track on the left bank of Wādī al-Gharz these inscriptions were found.

C 4756 (Dunand 880 b)

l ʾḥrg bn ʾys¹ ḏ- ʾl qs²m w kry l- ʾys¹ bn -h h- rmy f h lt s¹lm l- -h w s¹ʿd (-h) (h) rḍy

By ʾḥrg son of ʾys¹ of the lineage of Qs²m and he grieved for ʾys¹ his son the Roman and so O Lt keep {him} safe and help {him} {O} Rḍy

Apparatus Criticus:
C: *ʾḥlm* for *ʾḥrg*; *w kry l- ʾys¹ bn -h h- rgy* "and he dug for ʾys¹ his son this well" for *w kry l- ʾys¹ bn -h h- rmy* "and he grieved for ʾys¹ his son the Roman"; *w s¹ʿd b- (h) rḍy* "and happiness through (H-) Rḍy" for *s¹ʿd (-h) (h) rḍy* "and save {him{ {O} Rḍy"

Commentary:
The translation offered here is based on the following. We have interpreted *kry* on the basis of Syriac *kərā* "to grieve [for someone]" which can take either *ʿal* or *lə-* (Sokoloff 2009: 650b). Grammatically, there is no way of telling whether the author or *h-rmy* is the subject of this verb, but there seems no identifiable reason why a Roman should grieve for this man's son and so it is more likely that it was the author who was grieving. In this case *h-rmy* must refer to the son, ʾys¹. This does not mean, of course, that he was a Roman citizen (though depending on the date, it could be possible that he was). It is more likely that he had gone to work for the Romans, either as a soldier or in another capacity, and was called *h-rmy* by his family because of this. An alternative interpretation of *h-rmy* would be "the archer", compare Classical Arabic *ramā* "to shoot an arrow" (Lane 1161a). Either way, he was apparently in trouble and his father was worried for him.

Provenance:
On the left bank of Wādī al-Gharz, beside the track leading from Damascus to Zalaf (C p. 585), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where along this track on the left bank of Wādī al-Gharz these inscriptions were found.

C 4794 (Dunand 1009 a)

l mʾqn bn bḏfh w ʿly mgʿ

By Mʾqn son of Bḏfh and and he went up to pasture

Commentary:
With C, we have taken *mgʿ* as equivalent to Arabic *manǧaʿ* "pasturage" (see *mngʿ* in C 3235) with the assimilation of [n] as is common, though sporadic, in Safaitic. It would be in the locative (see Al-Jallad 2015: 201–202).

Provenance:
On the left bank of Wādī al-Gharz, near a bridge to the track leading from Damascus to Zalaf (C p. 589), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where this bridge is.

C 4866 (Dunand 1092)

l ḥny bn ʾk---- bn b----s¹ bn {ʾ}ʿl bn hgml h- dr s¹nt ws¹q bn rm nbṭ

By Ḥny son of ʾk---- son of B----s¹ son of ʾʿl son of Hgml was here the year of the struggle between Rome and

the Nabataeans

Apparatus Criticus:
C: *s¹nt ws¹q bn rm nbṭ* "the in which the Bn Rm pillaged the Nabataeans"

Macdonald 2009: II, 331 and n. 178: *s¹nt ws¹q bn rm nbṭ* "the year of the struggle between Rm and the Nabataeans".

Commentary:
For *ws¹q* compare Classical Arabic *wisāq* "strife" and for *bn* compare Arabic *bayna* "between". In Arabic, one would expect *w*a between *rm* and *nbṭ*, but this does not seem to be necessary in Safaitic.

Provenance:
On the right bank of Wādī al-Gharz, near the track leading from Damascus to Zalaf (C p. 593), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where this bridge is.

C 4902 (Dunand 1040 a)

l mʿd(')l (h-) dr s¹nt h- ġ{ṯ} w ṣyd h- gdd

{Mʿd'l} {was here} the year of much rain and he hunted on the level ground

Apparatus Criticus:
C: *w ṣyd h- gdd* "and he fished in this pool"

Commentary:
For *ġṯ* compare Classical Arabic *ġayṯ* "rain over a wide area, rain that is productive of much good" (Lane 2314b). C interprets *gdd* from Classical Arabic *ǧad* which he translates as "stagnant water at the edge of the desert". However, it appears that it is actually used of "a well [rather than a pool] in a place where there is much herbage" (Lane 385c, Groom 1983: 131–132, under "*Judd*") which would not be a suitable place for fishing. It should be noted, however, that fishing can certainly take place in desert pools where water has collected and has remained for several months. The Safaitic Epigraphic Survey Programme in 1996 saw a number of fishermen on the lake formed by the dam at Al-Namārah, and was given a fish, some 30 cms long, which one of them had caught. However, in this case, it seems more likely that *gdd* is to be compared to Arabic *ǧadad* "hard, level ground" (Lane 386c).

Provenance:
On the right bank of Wādī al-Gharz (C p. 600), Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where on the right bank of Wādī al-Gharz these inscriptions were found.

C 4981 (Dunand 964)

l kʿm{h} bn ----{y} bn ʾbyn w wl{h} f wlh ʿl- ʾs²yʿ -h f hy ʾlt ḥyy l- ḏ s¹ʾr

By {Kʿmh} son of ----{y} son of ʾbyn and {he was distraught} over and over again for his companions and so O ʾlt [grant] life to him who remains

Apparatus Criticus:
C: *[f]{n}y* for *----{y}*; *f h yʾlt ḥyy l- ḏ s¹ʾr* " and O Yʾlt life to the one who leaves [it] unimpaired"

Commentary:
There is no justification on the copy for C's restoration of the second name as *[f]{n}y*. C suggests that *w wlh f wlh* could be due to dittography but this seems unlikely given the different conjunctions used. Literally it means "he was distraught and then he was distraught", which we have translated as "he was distraught over

and over again", presumably every time one or more of his companions died or was in trouble. On the vocative particle *hy* see Al-Jallad 2015: 158–159, and for the meaning of of *s¹ʾr* see Al-Jallad 2015: 339–340.

Provenance:
On the right bank of Wādī al-Gharz, near the track from Ǧabal al-Drūz to al-Namāra, Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where on the right bank of Wādī al-Gharz these inscriptions were found.

C 4982 (Dunand 965 a)

l ʾḥlm bn ʿbdʾl bn s²ddt w wgd s¹fr l- mġṯ (f) bky w {g}{r}{z} ʿl- -h s¹lm f h lt s¹lm l- ḏ s¹ʾr w h ʾlt dṯn bʾs¹ l- ḏ yʿwr h- ḫṭṭ

By ʾḥlm son of ʿbdʾl son of S²ddt and he found an inscription by Mġṯ and so he wept and he was slain may he have security and so O Lt [grant] security to him who remains and O ʾlt Dṯn [inflict] misfortune on whoever scratches out the carving

Apparatus Criticus:
C: *w wgd s¹frn mġṯ* "and he found the inscriptions of Mġṯ" for *w wgd s¹fr l- mġṯ* "he found an inscription by Mġṯ"; *s¹lm l- ḏ s¹ʾr* "security to the one who leaves [it] unimpaired"

Commentary:
C's reading *w wgd s¹frn mġṯ* "and he found the inscriptions of Mġṯ" is, of course, impossible. As he noted in his commentary, the *-n* of *s¹frn* would be dropped in annexation. We have therefore suggested reading not *n* but *l* and to read *w wgd s¹fr l- mġṯ* "he found an inscription by Mġṯ". In this, *l-* would echo the beginning of most inscriptions and in particular C 4983 (*l mġṯ bn lʿṯmn*) which is also the only inscription by a Mġṯ recorded in this vicinity, another reason to doubt the reading *s¹frn*. For *grz* compare Classical Arabic *ǧaraza-hu* "he slew him" (Lane 408c), here in the passive. The expression *ʿl- -h s¹lm* probably stands for *ʿl- -h **h-** s¹lm in which the definite article has been assimilated to the preceding 3rd person singular enclitic pronoun. Compare Arabic *ʿalay-hi al-salām*. For the meaning of of *s¹ʾr* see Al-Jallad 2015: 339–340. On *ʾlt dṯn* see Macdonald, Al Muʾazzin & Nehmé 1996: 474–476 and n. 117.

Provenance:
On the right bank of Wādī al-Gharz, near the track from Ǧabal al-Drūz to al-Namāra, Al-Suwaydah or Rif Dimashq, Syria
Unfortunately, there is no way of knowing where on the right bank of Wādī al-Gharz these inscriptions were found.

l s¹ʿ{d} bn ḏbb bn ʾs¹d w rʿy h- ʾ- hrmt bql w wgm ʿl- bnyt w ʿl- ʾm -h w ʿl- gfnt f h lt s¹lm l- ḏ s¹lg

By S¹ʿd son of Ḏbb son of ʾs¹d and he pastured this [region of] ancient wells on spring herbage and he grieved for a young daughter and and for her mother and for Gfnt and so O Lt [grant] security for him who *s¹lg*

Apparatus Criticus:
C: l s¹ʿd bn ḏ{r}{r} bn ʾs¹d w rʿy h- ʾ(ʾ)rmt b- ql w wgm ʿl- bnyt w ʿl- ʾm -h w ʿl- gfnt f h lt s¹lm l- ḏ s¹(ʾ)(r)

Commentary:
The letters in the copy appear clear and consistent, thus there is definite distinction between *m* and *g*, which important in the interpretation of some sections (see below). The inscription contains several unusual features. Firstly, the phrase *h- ʾ- hrmt* is probably a rare example of the demonstrative *h-* "this" followed by definite article *ʾ-*, see Al-Jallad 2015: 78–79, 83. We have interpreted *hrmt* on the basis of Arabic *harāmīt* "ancient wells" (Lane 2892a) and, since *rʿy* is usually followed by the area pastured and/or the type of pasture, we have taken it as referring to a "[region of] ancient wells". If we are right in taking *bnyt* as "a young daughter", the following *ʾm -h* could refer either to "his" (i.e. the author's) mother or to her (i.e. the daughter's) mother, i.e. the author's wife. There is no way of deciding this. The word *bnyt* could, of course, also refer simply to "a young girl". The final word of the prayer is also problematic. The last letter can only be a *g* not a *m*, and C';s emendation to the common *s¹(ʾ)(r)*, is rather drastic. We cannot find a suitable

interpretation for this.

Provenance:
In an unknown part of Wādī al-Gharz (C p. 616), Al-Suwaydah or Rif Dimashq, Syria

C 5075 (Wetzstein 347)

(l) yʿmr w ṣyr mn- rḥb(t) s¹nt tlyt bnyd rḥbt

{By} Yʿmr and he returned to water from {the Rḥbt} the year *tlyt bnyd* the Rḥbt

Apparatus Criticus:
C: *s¹nt t()yt b- n(d)d rḥbtI* "in the year ----in the hills of the Rḥbt"

Commentary:
We are unable to offer an interpretation of *tlyt bnyd* and C's emendation to *b- n(d)d* and translation as "in the hills of the Rḥbt" is inappropriate since the Ruḥbah, as its name suggests, is a shallow depression not a hilly area. For the difference in Safaitic between *rḥbt* ("The Ruḥbah")and *h-rḥbt* ("this raḥabah") see Macdonald 1992: 23–25.

C 5089 (Wetzstein 361; W. Tafel I, II.a)

l ḍb bn s¹ḫr bn {s¹}by bn hdm bn mrz w (r)ʿ(y) (ʾ)ʾbl ʾl ṭ(y)ʾ f h lt qʾws¹ yʿwr (h-) ----

By Ḍb son of S¹ḫr son of {S¹by} son of Hdm son of Mrz and he pastured the herds of camels of the'l {Ṭy'} and so O Lt *qʾws¹* who scratches out {the} ----

Apparatus Criticus:
C: *[ʿ]b{d}* for *s¹by*; *(ʾ)dm* for *hdm*; *m(s¹)(k)* for *mrz*; *f h lt qʾ w s¹[ʿ] [w] ʿwr l- [ḏ] [y][ʿ][w[r] (----)* "and O Lt revenge and destruction and {blindness} to [him who scratches out] ----".

Commentary:
On the copies, the first letter of *(r)ʿy* is quite different from the other examples of *r* in the text but it is difficult to see what else it could be. The next phase, as it stands in the copy, would only be grammatical if it meant "the ʾl Ṭyʾ pastured the camels", which does not seem very likely, and so we have adopted C's emendation of *h* to *(ʾ)* giving *w rʿy ʾʾbl ʾl ṭ(y)ʾ* "he pastured the camel herds of the ʾl Ṭyʾ". Although, in Arabic *ibil* is a collective or "quasi-plural" and hence is feminine, it nevertheless has a plural *ābāl* used of "herds [of camels]" (Lane 8b). It is possible that *ʾʾbl* here represents such a plural, if the emendation is correct. The copy appears to be corrupt at the end of the text. C's attempts to read it do not make much sense and we have had to leave *qʾws¹* untranslated.

Provenance:
At various places between Ghadīr al-Darb and the village of al-Ishbikkī (Al-Shabkī) on the eastern slopes of Ǧabal al-ʿArab (C p. 624)., Al-Suwaydah, Syria
According to Dussaud & Macler 1903: 27–28 [429–430], the route they took on their journey from Ghadīr al-Darb to Ǧabal al-ʿArab was: Ghadīr al-Darb — Ṣenayim al-Gharz — al-Diyāthah —al-Shurayḥī — al-Ishbikkī (note that this is not Ishbikkat al-Namārah). Unfortunately, however, it is impossible to tell which inscriptions are from which place on this journey.

C 5127 (Dussaud M 791 b)

l mġyr bn wly bn ʿḏ bn ʿḏ bn ġṯ

By Mġyr son of Wly son of ʿḏ son of ʿḏ son of Ġṯ

Provenance:
At various places between Ghadīr al-Darb and the village of al-Ishbikkī (Al-Shabkī) on the eastern slopes of Ǧabal al-ʿArab (C p. 624)., Al-Suwaydah, Syria
According to Dussaud & Macler 1903: 27–28 [429–430], the route they took on their journey from Ghadīr al-Darb to Ǧabal al-ʿArab was: Ghadīr al-Darb — Ṣenayim al-Gharz — al-Diyāthah —al-Shurayḥī — al-Ishbikkī (note that this is not Ishbikkat al-Namārah). Unfortunately, however, it is impossible to tell which inscriptions are from which place on this journey.

Provenance:
At various places between Ghadīr al-Darb and the village of al-Ishbikkī (Al-Shabkī) on the eastern slopes of Ǧabal al-ʿArab (C p. 624)., Al-Suwaydah, Syria
According to Dussaud & Macler 1903: 27–28 [429–430], the route they took on their journey from Ghadīr al-Darb to Ǧabal al-ʿArab was: Ghadīr al-Darb — Ṣenayim al-Gharz — al-Diyāthah —al-Shurayḥī — al-Ishbikkī (note that this is not Ishbikkat al-Namārah). Unfortunately, however, it is impossible to tell which inscriptions are from which place on this journey.

l ʿnʾl bn (----) f h (l)t ġy[r][t]

By ʿnʾl son of ---- and so O {Lt} [grant] {abundance}

Provenance:
Mithnayat Wādī Rāǧil, Al-Mafraq, Jordan
According to Dussaud & Macler (1903: 29 [431]) Mithnayat Wādī Rāǧil or Dayr al-Shaʿīr was a ruined and deserted village. They found crosses on several lintels and a small place with a *qiblah* which had been used as a mosque. The cisterns, one of which was covered, were remarkable and there was a large *birkah* (reservoir) with a partially preserved staircase going down into it. In the early 1980s, when it was visited by the Jawa Epigraphic Survey which recorded a number of inscriptions there (see the MKMR texts), it was again inhabited.

By Ġnm B

Apparatus Criticus:
l ġ(n)m b[n](----)[C]

Provenance:
Wādī al-Aritayn, between Dayr al-Kahf and Azraq, Al-Mafraq, Jordan
[Latitude/Longitude: 32.27324 / 36.84094]
Dussaud & Macler's location is very vague. We cannot find a Wādī al-Irritayn, but there is a well-known mountain with two summits called Ǧabal al-Aratayn which is just south of the Mafraq-Baghdad road, about midway between Dayr al-Kahf and Azraq and presumably the wadi is not far from this.

Latitude: Dayr al-Kahf 32.27324; Ǧabal al-Aratayn 32.0959; Azraq 31.87983
Longitude: Dayr al-Kahf 36.84094; Ǧabal al-Aratayn 36.87409; Azraq 36.82776

l whb bn s²mt ḏ- ʾl rwḥ

By Whb son of S²mt of the lineage of Rwḥ

Commentary:
Macdonald 2009, I: 358 and n. 359 suggested that the lineage group *rwḥ* here could be represent the same group as *ʾl rwḥw* in LP Nab 43.

Provenance:
Umm al-Ǧimāl, Al-Mafraq, Jordan
[Latitude/Longitude: 32.328611 / 36.367778]
Umm al-Ǧimāl was an important town from the Nabataean to the Byzantine periods and many of the Safaitic inscriptions found there are well carved on basalt ashlars.

C 5175 (Eṣ-Ṣāliḥīye 1; Dura Europos S 1)

l gṯm' b- dwry

By Gṯm' at Dūrā

Apparatus Criticus:
Torrey 1931: 175: *l gṯm 'b dw* "Of Gṯm Abi Dw";

C: *l gṯm 'l dwy* "By Gṯm [of] the tribe of Dwy [?]"

Commentary:
The reading here is that made by Macdonald (2005: 119–121) from the photograph by R. Bertolino. The final letter of the text is a clear y and it is separated from the w by a r, though this is rather faint on the photograph. Neither gṯm nor gṯm' have been found before in Safaitic, but compare the Arabic name ǧaṯṯāmah used for both a man and a woman (see Lidzbarski 1902–1915, iii: 137) or the woman's name, gtmy, which has been found twice in a Palmyrene inscription (CIS ii 4604 A1 and B 3). We would suggest that the -' at the end of gṯm' represents either the Aramaic emphatic ending, which is occasionally found on personal names in Safaitic, see the list in Winnett & Harding 1978: 19, though note that the majority of these are paralleled by forms of the same name with the Safaitic article, h-, e.g. 'bd-' / h-'bd, whereas, to the best of our knowledge, a name *h-gṯm has not yet been found in Safaitic. Alternatively, it could be the hypocoristic ending -' which, like -y, is quite common on one-word names in Palmyrene. The name in this text could be that of either a man or a woman. If our reading and interpretation are correct, this is an extremely unusual Safaitic inscription, for two reasons. Firstly, to the best of our knowledge, this is the only text in this script in which the author has identified him- or herself simply by his/her name and the fact that he/she is in a particular geographical location (though compare Ms 64). A second peculiar feature of this text would be the use of matres lectionis. Normally, Safaitic inscriptions are written entirely without vowels or medial diphthongs. However, here it is probable that the -' of the personal name represents /-ā/ and, if dwry represents the name of the city, then the w must represent medial /ū/. The name appears as dwr' in two texts in the Palmyrene script from the city (PAT 1085/2 and 1094/1) and the use of -y in the Safaitic form to represent the final sound which appears as -' in Palmyrene can be paralleled by the spelling bṣry (Bostra) in a Safaitic text (SIJ 78) compared with bṣr' in Nabataean (see Macdonald 20015: 121, n. 15). The combination of the form of the personal name and the use of matres lectionis, suggests that the author was more familiar with Aramaic orthographic conventions than with those of the Safaitic graffiti. [Commentary adapted from Macdonald 2005: 119–121, by kind permission of Brill, Leiden].

C 5176 (Eṣ-Ṣāliḥīye 2; Dura Europos S 2)

Commentary:
Unfortunately,Torrey did not publish the two copies and a squeeze available to him, since "the drawings do not agree with each other nor with the squeeze and it is impossible to make out anything legible" (1931: 175). This is borne out by R Bertolino's photograph on which the letters are so faint, and the surface so covered with other marks, that it is not possible to make a coherent reading.

C 5177 (Eṣ-Ṣāliḥīye 3; Dura Europos S 3)

{ṣ}{w}f b{n} klb

{Ṣwf} {son of} Klb

Apparatus Criticus:
Torrey 1931: 176, followed by C: *l n(s¹)ryhb.*

Commentary:
Torrey did not interpret the first sign and read the rest as *ln(s¹)ryhb*. However, the photograph shows a finely scratched *ṣ* or possibly an *'*, before the first sign copied by Torrey. It is in a different technique from the rest of the text, but it looks deliberate and there is no sign of another inscription to which it might belong. After the *ṣ/'* there appears to be an elongated *w* and this is followed by a shallow *ẓ* or a *f* lying at 90° to the direction of the text. The form of the letter is clear, only its value is ambiguous. However, *ẓ* in this context does not seem to produce a possible name and I would therefore take the letter as *f*, reading the name as *ṣwf* or *'wf*. The former has not been found before in Safaitic, but is a perfectly possible name. Compare, for example, Arabic *ṣawwāf* "a wool-merchant". If, on the other hand, the name is *'wf*, this has been found once before in Safaitic and is presumably a diminutive of the more common name *'f*, perhaps *'Uwayf. On the photograph the *b* of *bn* is clear and the *n* seems to be a dot between its arms. The next letter is not at all certain but on the photograph looks like a *k*, the loop to one side of the stem on Torrey's copy being, in fact, two short bars whose ends do not appear to be joined. At first sight, the next sign looks like a *h* and was so copied by Torrey. However, on the photograph, the side stroke seems to be part of a long extraneous scratch below the letter, and the sign is probably a *l*. The last letter is probably a *b*. The short line transecting the curve seems, on close examination, to be extraneous. The name *Klb* is, of course, well-attested in Safaitic. [Commentary adapted from Macdonald 2005: 122–123, by kind permission of Brill, Leiden]

C 5179 (Eṣ-Ṣāliḥīye 5; Dura Europos S 5)

{ṣ}{b}{ḥ} bn n{s¹}{k} bn yḍr

{Ṣbḥ} son of {Ns¹k} son of Yḍr

Apparatus Criticus:
Torrey 1931: 176, followed by C: *h- s¹rb w h- bd ḍb* "the camel train and Bedouin Ḍb".

Commentary:
A band of rough lime runs through centre of the letters, obscuring parts of them. We have taken the first letter as *ṣ*, though the loop is barely visible on the photograph. The upper part of the second letter is very faint while the lower is very thick and touches the rather square *ḥ* which follows. The *b* of *bn* is clear and seems to be followed by two dot *n*'s cut into the band of lime which runs through the middle of the *s¹* which follows. This is presumably the reason that Torrey copied it as a *ḥ*, though he read it as a *w*. There is no sign on the photograph of the stem of the next letter which Torrey copied as a *h*. Instead there is a third, fainter "prong" to the left of the other two, making it a *ḥ* at 90° to the direction of the text, or more likely a *k*. The following *bn* is clear and the next letter is probably a *y*. What at first sight appears to be part of the stem above the loop can, on closer examination, be seen to be a thinner line which is not quite joined to the letter. The lower half of the next letter does not show up well on the photograph but is consistent with it being a *ḍ*, as shown on Torrey's copy, and the final letter is different from the *b*s and is perhaps more likely to be a *r*. The first name, if we have read it correctly, is very well attested in Safaitic, and the second is also known. The third has been found only once before in this form, in ISB 58, where it is at the top end of a genealogy of eleven generations. [Commentary adapted from Macdonald 2005: 122–123, by kind permission of Brill, Leiden]

C 5180 (Eṣ-Ṣāliḥīye 9; Dura Europos S 9)

l s²ʿm bn bgd ḏ- ʾl mʿgmʿ w ts²wq ʾl- ḫḏt w ʾl- gbt bʿṯ nʿm

By S²ʿm son of Bgd of the lineage of Mʿgmʿand he longed for Ḫḏt and for Gbt of the patrol of Nʿm

Apparatus Criticus:
Torrey (1932: 7–68): *l s²ʿ m- bny bgd ḥʾl mʿ gmʿ w ts²wq ʾl- tḥt w ʾl- gbt bʿṯ nʿm* "Of S²ʿ, of the Bny Bgd, passing by with a company; and he longed for Tḥt and for Gbt; sending a greeting";

C: *l s²ʿm bn bgd ḥʾl mʿ gmʿ w ts²wq ʾl- tḥt w ʾl- gbt nʿṯ nʿm* "By S²ʿm son of Bgd passing by with a company and he longed for TḥT and Gbt sending a greeting";

Jamme 1970: 88, no. 148: *l s²ʿm bn bgd ḏ- ʾl mʿgmʿ w ts²wq ʾl- ḫḏt w ʾl- gbt bʿṯ nʿm* "By S²ʿm son of Bgd him of the tribe of Mʿgmʿ. And he was longing for Ḫḏt and for Gbt both having followed Nʿm";

Commentary:
The reading and interpretation here is that of Macdonald 2005: 124. Unfortunately R. Bertolino was unable to rediscover this inscription at Dura Europos and so we do not have a photograph of it. According to Torrey the "text runs down [the pillar] perpendicularly, then [turns] horizontally to the right ... halfway around, then rises again in a perpendicular line" (1932: 66–67). To judge from Torrey's facsimile (copied from the squeezes) and his description, the text was well-cut and the reading of the letters seems clear. The signs for *g*, *ʿ* and *n* are well distinguished and the only letter with an unusual form is *ḏ*, which both Torrey and C read as *ḥ*, though its value is not in doubt thanks to the expression *ḏ- ʾl*. The first name has been found in three other Safaitic inscriptions (JaS 160.2, KRS 1828, MAHB 3) and the second is fairly well-attested. However, the "tribal" name, *mʿgmʿ*, is so far unique and, at first sight, would seem to belong to the small number of names found occasionally in Safaitic which end in an *ʿ* which is not part of the root, e.g. *ʿnʿ* (WH 147), *qdmʿ* (MSTJ 1), *tmʿ* (WH 1125), etc. In each of these cases, however, the letters before the *ʿ* represent elsewhere the non-divine element in theophoric names, thus, for instance, *ʿnʾl*, *qdmʾl*, *tmʾl*, etc. This is not the case, however, with *mʿgm*, which, anyway, would not make a suitable element in such a name. At present, we can offer no explanation of this *ethnicon*. *Ḫḏt*, the first of the two names after *ts²wq ʾl-*, has not been found before. Assuming that Torrey's facsimile is accurate, there can be no doubt about the reading. The etymology is, however, much more difficult. The second name *gbt* may have been found once before in Safaitic, in C 3767 though even here the reading is not entirely certain. We have taken *bʿṯ* as the equivalent of Arabic *baʿṯ*, *baʿaṯ* and *baʿīṯ* meaning "someone or something sent", hence "a messanger", or "an army, force, or patrol that is sent out" (Lane 223b). *Nʿm* could be a personal name, or the equivalent of Arabic *naʿam* "camels and sheep and/or goats when pasturing", or of Arabic *naʿīm* "blessing, comfort, enjoyment, well-being" (Lane 3035b–c). There are thus at least three ways of interpreting the phrase. (1) *bʿṯ nʿm* could be in construct with *gbt*, literally "Gbt of the patrol of Nʿm", meaning that Gbt was a member of Nʿm's patrol; or (2) *bʿṯ nʿm* could be in apposition to *gbt*, i.e. meaning "Gbt, Nʿm's messenger"; or (3) *bʿṯ* could be a participial circumstance clause referring to *gbt*, followed by an adverbial accusative *nʿm*, thus equivalent to an Arabic *baʿīṯ naʿam*^{an} meaning literally "sent out with regard to the pasturing animals", i.e. "who was sent out [to look after] the pasturing animals". Of these, we would suggest that (1) is probably the most likely. [Commentary adapted from Macdonald 2005: 123–126, by kind permission of Brill, Leiden]

C 5181 (Wetzstein 363)

l mġyr bn ḫlf bn mġyr [b][n] (ṣ)ʿ{d} f h lt ġy[r]t

By Mġyr son of Ḫlf son of Mġyr {son of} {Ṣʿd} and so O Lt [grant] abundance

Commentary:
C 5181–5199 were copied by an Arab man whom Wetzstein employed as a guide.

Provenance:
Unknown, possibly al-Namārah area (Grimme 1929:123), Al-Suwaydah or Rif Dimashq, Jordan
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 5186 (Wetzstein 368)

l mḍ b{n} {ʾ}lh

By Mḍ son of ʾlh

Commentary:
C 5181–5199 were copied by an Arab man whom Wetzstein employed as a guide.

Provenance:
Unknown, possibly al-Namārah area (Grimme 1929:123), Al-Suwaydah or Rif Dimashq, Jordan
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 5181–5199 were copied by an Arab man whom Wetzstein employed as a guide.

Provenance:
Unknown, possibly al-Namārah area (Grimme 1929:123), Al-Suwaydah or Rif Dimashq, Jordan
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.
