C: w wgʿ (s²)lm "and he was wasted by sickness" for w wgʿ ẓlm "and he grieved in pain for Zlm".

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādi al-Shām" (C. p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

By ḫml t son of ṣrmt (son of) ṭbd son of ṣʿd and he found the inscriptions of his (maternal uncle) and his paternal uncle (and) his companions and grieved in pain alas

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wāḍī al-Shām" (C p. 304), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shāм" [C p. 304], Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2827 (Dunand 286)

l qdm bn 's'l ml bn qdm bn 'ṯ h ḥ ll h- dr f h lt s'l ml w 'wr ḏ y'wr h- s'fr

By Qdm son of 's'l lm son of Qdm son of 'ṯ h and he camped in this place and so O Lt [grant] security and blind whoever scratches out the writing

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m), C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (i) "In the neighbourhood of Zalaf, near Wādī al-Shām" (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Ṯiq Qaṣqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

C 2947 (Dunand 741)

l {ṣ²krʾ} bn rmyn bn mgṭ ʿl- ʾmrtn w ndm ʿl- ḫl mḥlt mḥlt b- ḫl ld f ḫl mt w ds²r nqmt mn mn mrṭ -h

By {Ṣ²krʾ} son of Rmyn son of Mgṭ of the lineage of ʿmrṭ and he was devastated by grief on account of his brother Mgṭ who was killed near Ḫld, so, ʿLt and Ds²r, let there be vengeance against whoever has taken him away(?).

Apparatus Criticus:
C: “b- ḫl ld” for “b- ḫl ld”

Provenance:
Zalaf (k) “On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf” (C p. 381), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is “3 km upstream towards Zalaf”.

C 2968 (Dunand 748 e)

l sʾr bn (ḥ)dy

By Sʾr son of Ḫdy

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381). Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riġm Qaʿqūl,
but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is “3 km upstream towards Zalaf”.

C 2988.1 (Dunand 755 a)

l tm

By Tm

Apparatus Criticus:
C takes the l and t of this text as part of 2988, and the m as the last letter of 2989.

Milik 1980: 53, n. 14: read this as a separate inscription from C 2988.

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C.p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296] Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qa‘ūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is “3 km upstream towards Zalaf”.

Zalaf (k) “On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf” (C p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296] Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is “3 km upstream towards Zalaf”.

C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Apparatus Criticus:
C: s³lw` "help" for "he left"

Provenance:
Zalaf (l) "On the left bank of Wādī al-Shām, in the area of Zalaf, downstream" (C p. 405), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C's description is so vague as to be useless.

Apparatus Criticus:
C: 1 mlk bn 'sɔ wdʾ bn b's'h bn 'l[h][m] bn qt'n bn hgml

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names
Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C’s description means.

C 3169 (Dunand 848)

{l} ns¹rk w ngr {h}{g}(t)----

By S¹rk and he was on watch ----

Apparatus Criticus:
C: {h}{s²}{t} for {h}{g}{t}

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410). Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Ṣām Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

[Z:Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C’s description means.

C 3218 (Dunand 871 c)

l ms¹kʾl bn nʾm bn ẓnn

By Ms¹kʾl son of Nʾm son of Ẓnn

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C’s description means.

lʾḥl bn qfnṣʾ

By ʾḥl son of Qfnṣʾ

Provenance:
Ishbikkat al-ʾNamārah, Rif Dimashq, Syria

Latitude/Longitude: 32.89645 / 37.31101

C’s location of this inscription as "on the track from al-ʾUdayṣıyāh to al-ʾNamārah, not far from al-ʾNamārah" (C p. 420), is less precise than Dussaud & Macler’s: "at the beginning of Ishbikkat [al-ʾNamārah]" (1901: 88).
This is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ġabal al-'Arab, mentioned in Dussaud & Macler 1903: 28.

l hĮ(f) bn ẓn bn b'ḏḥ bn ẓhm bn 'Į(l)m bn hqmt

By HĮ(f) son of Ẓn son of B'ḏḥ son of Zhm son of Ẓlm son of Hqmt

Apparatus Criticus:
C: l hĮ(f) bn ẓn bn b'ḏḥ bn ẓhm bn 'Į(l)m bn hqmt

Provenance:
Ishbikkat al-Namārah, Rif Dimashq, Syria

C=s location of this inscription as "on the track from al-"Udayṣīyah to al-Namārah, not far from al-Namārah" (C p. 420), is less precise than Dussaud & Macler's: "at the beginning of Ishbikkat [al-Namārah]" (1901: 88). This is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ġabal al-'Arab,
Corpus of Safaitic inscriptions

mentioned in Dussaud & Macler 1903: 28.

AlʾIsawi, Rif Dimashq, Syria

[Latitude/Longitude: 32.89645 / 37.31101]
AlʾIsawi is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-ʾNāmarāh dam to the Rubḥah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions.

C 3265 (Dussaud V 206)

By Mqtl son of Btmh

Provenance:
"Near the track leading from the mouth of Wādī al-Gharz to al-Namārah" (C p. 425), "on the right [= west] of the road" (Dussaud & Macler 1901: 86), Rif Dimashq, Syria

[Latitude/Longitude: 32.9035 / 37.2962]

The location of these texts is complicated by the fact that a small wadi debouches into the Ruḥbah at a point some 1.2 km south-west of the mouth of Wādī al-Gharz, near the point at which the "Roman road" meets the Ruḥbah. The douchment of this wadi seems sometimes to have been confused with that of the Wādī al-Gharz. If this was so in this case, Dussaud & Macler may have been following the "Roman road" from the point at which this unnamed wadi debouches into the Ruḥbah southwards to al-Namārah, in which case these inscriptions would belong with C 2276–2319

Latitude: southern end of the "Roman road" approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the "Roman road" approximately 37.2962, northern end approximately 37.2951

References:

C 3282 (Dussaud V 220)

\textit{l \text{wzn} (t) \text{bn} \text{b} ----}

By Wznt son of

Provenance:

"At the entrance of Ishbikkat [al-Namārah]" (C p. 427), Rif Dimashq, Syria

[Latitude/Longitude: 32.8935 / 37.3068]

The co-ordinates are based on taking "the entrance" in C’s description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbilkah on the Ġabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

"At the entrance of Ishbikkat [al-Namārah]" (C. p. 427), Rif Dimashq, Syria

\[\text{Latitude/Longitude: } 32.8935 / 37.3068\]

The co-ordinates are based on taking "the entrance" in C’s description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbilkah on the Ġabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Latitude/Longitude: 32.8935 / 37.3068

The co-ordinates are based on taking "the entrance" in C’s description as the point at which Wādī Shām widens into the area now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on “islands” within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbīkka on the Ġabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

C 3333 (Dussaud V 280)

lʾʾs¹d bn ḫṭs¹

By ʾʾs¹d son of ḫṭs¹

Provenance:
"Ishbikkat [al-Namārah]" (C p. 431), Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Gabal al-'Arab, mentioned in Dussaud & Macler 1903: 28.

Ishbikat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Ġabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Provenance:
"The area of al-Namrah" [C p. 438], Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namrah itself is an "island" in a basin at the confluence of the Wâdi al-Ṣawṭ and the Wâdi al-Shâm. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius [Waddington 1870: no. 2264] and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

"The area of al-Namārah" (C p. 438), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Sawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C. p. 443), Rif Dimashq, Syria

[Latitude/Longitude: 32.88545 / 37.29163]

Al-Namārah itself is an “island” in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it’s top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been re-used to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī ʿl-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Sawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Latitude/Longitude: 32.88545 / 37.29163

Al-Namārah itself is an “island” in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it’s top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
Al-Namārah (C p. 44.3), Rif Dimashq, Syria

[Latitude/Longitude: 32.88513 / 37.29163]

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Saffaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C.443), Rif Dimashq, Syria

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

By Bhīl son of Frk

Provenance:
Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]

Al-Namārah itself is an “island” in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Šām. The
island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
The environs of al-Namârah (C. p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
This is not one of the four texts which Graham said (1858: 714) came from "the neighbourhood of al-Namârah" (1858: 714). C probably placed it here because, in Graham 1860: pl. III, it is placed above the text (22 b) which C identifies with Graham 1858: no. 21, which is among those from "the neighbourhood of al-Namârah" (1858: 714). Al-Namârah itself is an "island" in a basin at the confluence of the Wâdí al-Šawt and the Wâdî al-Shâm. The island rises to a considerable height above the wadi bed. On it’s top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. "Between al-Namārah and al-Hīfnah" (C p. 462), Rif Dimashq and or al-Suwaydah, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Hīfnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hīfnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé
1996, Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Hawrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

[Latitude/Longitude: 32.88545 / 37.29163]
Al-Ḥifnah is at a point at which Wádi al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu‘azzin, Nehmé 1996. Litmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-‘Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Litmann 1943: 1).

By ʾmr son of ʾthm

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria

Latitude/Longitude: 32.76784 / 37.00326

Al-Ḥifnah is a place-water in the Wādī al-Shām, between the Ḥawrān mountains [Gabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pastureage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

l žhrn bn ẓrd bn (ṣ)’b

By Żhrn son of Ṣrd son of Ṣb

Provenance:
Al-Hifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Hifnah is at a point at which Wadi al-Sham becomes a wide gorge, and the site of al-Hifnah runs downstream from a series of wells in the wadi bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu’azzin, Nehmé 1996. Littmann wrote “Al-Hifnah is a water-place in the Wāḍi al-Shām, between the Ḥawrān mountains [Ǧabal al-‘Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pastureage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Hifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Hifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ħawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943:1).

C 3740 (Dussaud M 270; LP 23)

\( l \ hṭ(ṣ)\)t bn \( fḥt\) bn \( bḥs\)²

By \( ḥṭ\)ṣ't son of \( fḥt\) son of \( bḥs\)²

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria

Latitude/Longitude: 32.76784 / 37.00326

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This site is C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote “Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

l ʿdl bn ʿz ʿn y(ʾ)(d)

By ʿDl son of ʿZn son of Yʾd

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote “Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ḡal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

Commentary:
Littmann published this inscription twice, once as LP 60 and once as LP 1293.1

Provenance:
Al-Hifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Hifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Hifnah is a water-place in the Wādī al-Shām, between the Hawrān mountains [Ǧabal al-ʿArab] and al-Nemārāh. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. C 3798 (Dussaud M 324; LP 33, 862)

l syḥ bn mlk

By Syḥ son of MLk

Provenance:

Al-Ḥifnah, Al-Suwaydah, Syria

Latitude/Longitude: 32.76784 / 37.00326

Al-Ḥifnah is at a point at which Wāḍī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wāḍī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Šām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé
1996. Littmann wrote "Al-Hifnah is a water-place in the Wādī al-Shām, between the Hawrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādi bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādi al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This site is C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Sharp becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the
escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu‘azzin, Nehmé 1996. Littmann wrote "Al-Hifnah is a water-place in the Wādi al-Shām, between the Ḥawrān mountains [Ḡūbal–Ar’ab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Ṣām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādí bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu‘azzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Ṣām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu’azzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

The bed of the wādī is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wādī there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

Provenance:
Al-Ḥifnāh, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnāh is at a point at which Wādī al-Šām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wādī, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmē 1996. Littmann wrote “Al-Ḥifnāh is a water-place in the Wādī al-Šām, between the Ḥawrān mountains.
[Ǧbal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. [Latitude/Longitude: 32.7333 / 36.8833]

The village of al-Wāsim is on the lower, eastern slopes of Ġabal al-‘Arab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The word kawm means "a mound, or small hill" and Kawm al-Wāsim is just such a mound, about 1.8 km north-east of the village, on the right bank of the Wādī Ishbikkī. It is surmounted by a large circular structure (approx. 15 m in diameter) built of rough, apparently Cyclopaean, masonry. The Safaitic inscriptions are carved on the blocks in situ — suggesting that they postdate the abandonment of the building — and on the rocks of a natural platform overlooking the wadi.

The spring at al-Wāsim (Dussaud & Macler 1903: 28 {430}), Al-Suwaydah, Syria

[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Gābal al-ʿArab, in the Wādī Ishbikki (Al-Shabkì) which is one of the numerous tributaries of the Wāḍī al-Shām. The spring is in the Wāḍī Ishbikki about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a “step” in the bed creating a “waterfall” about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

The village of al-Wāsim is on the lower, eastern slopes of Ġabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikkī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a "step" in the bed creating a "waterfall" about 20 m from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

The village of al-Wāsim is on the lower, eastern slopes of Ḡabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikkī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a “step” in the bed creating a “waterfall” about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

Qalʿat al-Wāsim (Dussaud & Macler 1903: 28 [430]), Al-Suwaydah, Syria

[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ġabal al-ʿArab, in the Wādi Ishhīkī (Al-Shabkī) which is one of the numerous tributaries of the Wādi al-Shām. Qalʿat al-Wāsim is a large cairn between Kawk al-Wāsim and the spring in the Wādi Ishhīkī (see the notes under C 4024). Dussaud & Macler describe it as a "watch-tower". Note that they distinguish between Kawk al-Wāsim (which is surmounted by a large circular structure which they describe as "some ruins") and Qalʿat al-Wāsim.

l ʾrgmʾl bn grʾlmʾ bn bhṯn dmy

By ʾGrmʾl son of ʾGrmʾl son of Bḥṯn he drew

**Provenance:**  
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria  
Latitude/Longitude: 32.7161 / 36.9315

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

(By) S²ʿb ----

Apparatus Criticus:
C: l s²ʿ(b) bn zn nos b[n] ----

Provenance:
In the Wâdî Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.7161 / 36.9315]

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wâdî Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219-4249]."

C 4217 (Mascle-Mouterde 21.2)

lʾbgr bn nʾmn bnʾbgr bn ʾnṣr

By ʾbgr son of Nʾmn son of ʾbgr son of Nṣr

Apparatus Criticus:

C: bn [g][r][m][ʾ][l] C --- at the end where there is a clear vertical line to separate the end of this text from the end of one coming in the opposite direction.

Jamme 1971: 27 reads as C but adds 2417 as a continuation of the genealogy, thus lʾbgr bn nʾmn bnʾbgr bn ʾnṣr bn ʾgrʾl bn ʾgrʾl bn bḥṯn a reading which is not borne out on the photograph.

Provenance:

In the Wâdî Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria.

[Latitude/Longitude: 32.7161 / 36.9315]

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wâdî Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

l {k}zn bn ----

By (Kznn) son of ----

Apparatus Criticus:
C: l zn bn ‘bdl;

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria.

[Latitude/Longitude: 32.7161 / 36.9315]

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

**Apparatus Criticus:**
MNH p. 311 n. 50: on the provenance of the inscription.

**Provenance:**
Between the village of Höyeyt Hibikke and Ghadir Abū Za'rūr, Dussaud & Macler 1903: 26 [428], 83 [485], Al-Suwaydah, Syria

[Latitude/Longitude: 32.5561 / 36.8672]

Dussaud & Macler (1903: 26 [428]) say that they found this, the first Safaitic inscription on this journey, three hours \(=13.2\) km, see below] after leaving Höyeyt Hibikke. We have been unable to identify this village with any certainty, nor indeed the nearby village of Hibikke shown on their map and that of Wetzstein (1860). A small modern town called Al-Hwayyah is in roughly the right position and we have given its co-ordinates above but this is not at all certain. The distance, as the crow flies, between Al-Hwayyah and Ghadir Abū Za'rūr is approximately 22 km which is roughly the distance Dussaud and Macler would have covered in the 4 hours 50 minutes they say their journey took (1903: 26 [428]), according to the measures of distance and time for travel on horseback in the hararah given by Wetzstein (1860: map) which is the same as that given by Butler, viz: "an average of two and three-quarter miles \(=4.4\) km per hour for ordinary going and three miles per hour on good roads" (Butler, Norris & Stoever 1930: vii).

**Latitude:** Possibly modern Al-Hwayyah 32.5561; Ghadir Abū Za'rūr 32.71667

**Longitude:** Possibly modern Al-Hwayyah 36.8672; Ghadir Abū Za'rūr 36.95

Provenance:
On a cairn between al-'Ilīmmah and the left (west) bank of Wādī al-Gharz, Al-Suwaydah, Syria
[Latitude/Longitude: 32.6427 / 37.1935]
De Vogüé specifies that C 4251–4258 and 4351–4352 were found at "the ruǧm near to al-‘Ilīmmah" (1868–1877:147), which according to Butler consists of "seven round hills" (Butler, Norris & Stoever 1930: 26). The cairn is marked "R" (for ruǧm) on de Vogüé’s map (1865), where it is clear that it is directly between al-‘Ilīmmah and the left (west) bank of Wādī al-Gharz.

C 4252 (Vogüé 316)
lṣʾ(d) bn ḫyḏ
By Sʾd son of ḫyd

Provenance:
On a cairn between al-‘Ilīmmah and the left (west) bank of Wādī al-Gharz, Al-Suwaydah, Syria
[Latitude/Longitude: 32.6427 / 37.1935]
De Vogüé specifies that C 4251–4258 and 4351–4352 were found at "the ruǧm near to al-‘Ilīmmah" (1868–1877:147), which according to Butler consists of "seven round hills" (Butler, Norris & Stoever 1930: 26). The cairn is marked "R" (for ruǧm) on de Vogüé’s map (1865), where it is clear that it is directly between al-‘Ilīmmah and the left (west) bank of Wādī al-Gharz.

C 4259 (Vogüé 321)

lgn bn ṣnt

By ṣnt son of ṣnt

Provenance:
On a series of nameless cairns or small groups of inscriptions in al-Kraa (al-Qara‘ah), Al-Suwaydah, Syria. De Vogüé says that C 4259–4283 were found on isolated stones or in small groups* (1868–1877:147), during his and Waddington’s journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab. This took them through the area known as al-Kraa (al-Qara‘ah) which is bounded by the Dirat al-Tulūl and the Ǧafā in the north and Wādī al-Gharz on the south and east. During the journey they passed near al-ʿIlimmah (Latitude: approximately 32.8427; Longitude: approximately 37.1935) and south of al-Kusayrah (Latitude 32.93611; Longitude 37.15861 from Geonames). Apart from this we have no indication of their route,
beyond the dotted line on de Vogüé’s map (1865).

Provenance:
On a series of nameless cairns or small groups of inscriptions in al-Kraa (al-Qara’ah), Al-Suwaydah, Syria De Vogüé says that C 4259–4283 were found on isolated stones or in small groups* (1868–1877: 147), during his and Waddington’s journey from al-Namârah to the village of Shaqqâ on Ḍrab al-ʿArab. This took them through the area known as al-Kraa (al-Qara’ah) which is bounded by the Dirât al-Tulûl and the Ṣafâ in
the north and Wādi al-Gharz on the south and east. During the journey they passed near al-ʿIllīmmah (Latitude: approximately 32.8427; Longitude: approximately 37.1935) and south of al-Kusayrah (Latitude 32.9361; Longitude 37.15861 from Geonames). Apart from this we have no indication of their route, beyond the dotted line on de Vogüé’s map (1865).

By H’s1 son of Rbn son of ’hd

Provenance:
On a cairn in al-Kraa (al-Qara’ah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria
(Latitude/Longitude: 32.93561 / 37.15839)

De Vogüé and Waddington’s journey from al-Namārah to the village of Shaqqā on Ǧabal ʿArab took them through the area known as al-Kraa (al-Qara’ah) which is bounded by the Ǧīrāt al-Tulūl and the ʿṢafā to the north and Wāḍi al-Gharz on the south and east. De Vogüé’s map (1865) on which this cairn is marked “R” (for ruǧm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harrah given by Wetzstein (1860: map) which is the same as that given by Butler, viz: “an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going...” (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

De Vogüé and Waddington’s journey from al-Namârah to the village of Shaqqâ on Šâbal al-‘Arab took them through the area known as al-Kraa [al-Qara‘ah] which is bounded by the Dîrat al-Tulûl and the Şâfî to the north and Wâdî al-Gharz on the south and east. De Vogüé’s map (1865) on which this cairn is marked “R” (for ruğm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harrah given by Wetzstein (1860: map) which is the same as that given by Butler, viz “an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going…” (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

\[C_1\, lm(j)yr\, bn\, s¹\, zh\, bn\, s¹\, q\, g\, 'br\, w\, mty\, s¹nt\, brh\, 'qs(y)\, mdнт\, h\, lt\, ꜱnmt\, m-\, s²\, 'bl\]

Provenance:

On a cairn in al-Kraa (al-Qaraʾah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.93561 / 37.15839]

De Vogüé and Waddington’s journey from al-Namārah to the village of Shaqqa on Jabal al-ʿArab took them through the area known as al-Kraa (al-Qaraʾah) which is bounded by the Dīrat al-Tulūl and the Ṣafā to the north and Wādī al-Gharz on the south and east. De Vogüé’s map (1865) on which this cairn is marked "R" (for ruǧm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harrah given by Wetzstein (1860: map) which is the same as that given by Butler, viz “an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going...” (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

By ḫbṣ son of Mty son of ʿdy and he quenched his thirst at H-Nmrt and so O Lt [grant] security from enemies.

**Provenance:**
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

C 4360 (Dussaud M 471; LP 925)

ls²dd bn mlkt bn ḥṣ²s‘t bn flt bn zf w ḡḥb l- b‘t ls²mn f wqyt

By Sḍḍ son of mlkt son of ḥṣṭ son of flt son of zf and he sacrificed to {b‘t ls²mn} so, protection

Apparatus Criticus:
Cṣ(l)tt bn b(h)s‘t for fltt bn zf.

Commentary:
The reading here is based on the LP 925 copy which, though a mirror-image of Dussaud M 471, clearly represents the same inscription.

Provenance:
Al-Namārah area, Al-Suwaydah, Syria

[Latitude/Longitude: 32.88545 / 37.29163]

According to Dussaud & Macler (1903: 151), this inscription was found between al-Namārah and Ghadir al-Darb, but according to Littmann (1943: 220) it comes from Al-Namārah. Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Šawt and the Wādī al-Šām. The island rises to a considerable height above the wadi bed. On it’s top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 4361 (Dussaud M 472; LP 924)

lʾ(ṯ)m bn ʾzʾkt bn ʾsʾlm

By LʾVm sn of Zʾkt sn of ṣʾlm

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between Al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4378 (Dussaud M 489)

l Ṣdn bn ʾšmkʾl bn ymtnʿ bn ʾyṛ

By Ṣdn son of ʾšmkʾl son of Ymtnʿ son of ʾYṛ

Provenance:
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

l ṭs¹ bn zhkh bn ‘lwhb

By ṭs¹ son of Zhkh son of ‘lwhb

Provenance:

Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghdīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0007608.html
These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

By Sʰm son of Fny son of {Fny} son of Qdm son of {Fny} son of Ġyrʾl and he grieved for his brother

Commentary:
C identifies Dussaud M 515 with LP 926, although the copies differ considerably in the second half of the text. However, LP 926 is one of the inscriptions copied by one of the "servants of the Princeton University Archaeological Expedition" (Littmann 1943: iii), who would not have known Safaitic, and this may explain the differences.

Provenance:
Al-Mroshan, Al-Suwaydah, Syria  
[Latitude/Longitude: 32.844275 / 37.19575]  
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mroshan (1904: 156). Provenance:
Al-Mrŏshan, Al-Suwaydah, Syria

[Latitude/Longitude: 32.844275 / 37.19575]

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadīr al-Darb, but Littmann is more specific saying that it comes from Al-Mrŏshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Saffaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4418 (Dussaud M 526 b)

l nk bn nms¹w bn s²bt

By Nk son of Nms¹w son of S²bt

Apparatus Criticus:

C: l n(r) bn nms¹(t) b[n] ns²bt

Provenance:

Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" ([1903: 151 [553]] and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz ([1903: 27 [429]]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" [1903: 151 [553]] and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz [1903: 27 [429]]. According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

By ʿlm son of S̲ t d son of Ms̲ k son of Rmmt and for Tmm, father of H’s̲ t, his son, and may [Gd][w] grant ease to whosoever was captured that he may be secure.

Provenance:
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria

Dussaud & Macler, followed by C, give the provenance of this inscription simply as “between al-Namārah and Ghadir al-Darb” (1903: 151 [553]) and describe Ghadir al-Darb as “a muddy pool of water” in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the Princeton (1904–1905) expeditions, and he locates them at al-Mröshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Provenance:
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Provenance:
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667,
but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mrōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.
