[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāšī track and its debouchment into the Ruhbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and caim overlooking the Ruhbah (where there are approximately 60–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wāḍī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

Haǧar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruǧm al-Marʾāh. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruǧm al-Marʾāh, but this can only be a very approximate position. Note that this site is not the same as Ḥuǧayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

C 703 (Dunand 1131)

l'smt bn (r)ts't
By S'mt son of Rts't

Provenance:
Haṣar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Mar‘ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Mar‘ah, but this can only be a very approximate position. Note that this site is not the same as Huğayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

C 766 (Dunand 1161 a)

*l mty bn š¹lh hm w gm ʾhl [-h] h- frs¹*

By Mty son of š¹lh hm and he grieved (for) {his} family [and his is] the horseman

**Apparatus Criticus:**

C: šlm for š¹lh hm; wgm ṭl h- frs¹ for wgm ṭ[-h] h- frs¹

**Commentary:**

The phrase ṭlhfrs¹ for *ṭalḥafras¹ is probably an example of cross word-boundary assimilation, as in
Provenance:
Hağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Mar‘ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Mar‘ah, but this can only be a very approximate position. Note that this site is not the same as Huğayr al-Helle, where C 2 was found, which is on the north-western edge of the Şafā.

Hağar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Mar‘ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Mar‘ah, but this can only be a very approximate position. Note that this site is not the same as Huǧayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

śwʾd bn rgl bn h(n) yw ḏbb f h gdʾw ṣʾlm w ṣf ṣw ṣ(n)y
By Śʾwʾd son of Rgl son of Ḥny and he sacrificed and 0 Gdʾw [grant] security and he followed and migrated —

Apparatus Criticus:
C: śʾwʾd bn rgl bn h(g)y w ḏbb f h gdʾw ṣʾlm w ṣf ṣw ṣ(n)y

Provenance:
Haǧar al-Helle, Rif Dimashq, Syria
[Latitude/Longitude: 33.1847 / 36.9501]
We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruǧm al-Marʿah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruǧm al-Marʿah, but this can only be a very approximate position. Note that this site is not the same as
Huǧyar al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

Provenance:
A cairn north of Khirbat al-Umbāšī, Al-Suwaydah, Syria
[Latitude/Longitude: 33.06268 / 36.97072]
Khirbat al-Umbāšī is a site on an "island" in a wadi, with settlements dating mostly from the second half of the third millennium to the early second millennium BC. In addition there are two large cemeteries to the east and south-west with over 1000 megalithic tombs (see Braemer, Echallier & Taraqi 1993). It is at the northern extremity of the Kraa (al-Qara‘ah) and about 30 km from nearest villages on Gabal al-‘Arab. The cairn where these inscriptions were copied has not been rediscovered.

C 888 (Dussaud V 412)

l qdm bn mn’m bn brd bn ġyr’l

By Qdm son of Mn’m son of Brd son of ġyr’l

Provenance:
Between Khirbat al-Umbāšī and Gabal al-‘Arab (Gabal al-Drūz), Al-Suwaydah, Syria
C wrongly placed this text with those from the cairn north of Khirbat al-Umbāšī. However, it is clear from Dussaud & Macler 1901: 121 that it was not copied there (even if their "Nebech" = Umbāšī) but "1 hour and 25 minutes further" "on the track which leads to the Gabal al-Drūz". They did not copy any of the texts at the cairn they found near Khirbat al-Nebech.

**Provenance:**
Khirbat al-Hubayriyyah, Al-Suwaydah, Syria
[Latitude/Longitude: 33.01718 / 37.03125]
Khirbat al-Hubayriyyah is an ancient site at the northern end of the Kraa (al-Qara’ah), some 7.5 km southeast of Khirbat al-Umbāshī. Apart from C 918–920 which were found at the site itself, the inscriptions were found in the surrounding area. Note that C spells the name with an initial "Ḥ", whereas according to geonames.org it should be "Ḥ".

Al Ṣʿudaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: “Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts $[V \, 56-130 = C \, 924-1016]$. Near to one of them we found another quarry” (1868-1877: 144).

[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are
covered with them. We explored four of these which furnished us with texts \( V 56-130 = C 924-1016 \). Near to one of them we found another quarry" (1868-1877: 144).

l ʾs₂h bn ʿlmymt
By ʾSḥ son of ʿLymyt

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Šām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Provenance:
Al-l’ḏaysiyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Šām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-’Udaysiyah. He writes: "Strictly speaking, the name al-’Udaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stone work. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-’Udaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868-1877: 144).

Al-ʿUdaysiyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Šām), Rif Dimashq, Syria

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868-1877: 144).

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes:
"Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

l ḍlm bn ʿnʿm bn īṭmn bn whbʾl bn ḍr bn grmʾl bn ʾḥ bn ʿz(h)m bn ʿz(h)m w ḍgb b- ṣr ḥbb

By ʾḥlm son of ʿnʿm son of īṭmn son of Whbʾl son of ḍr son of Grmʾl son of ʾḥ son of ʿz(h)m (son of) Mr’ son of (ʿžhm) and he was angry on account of the traces of ḥbb

Apparatus Criticus:
Corpus of Safaitic inscriptions

C. "In"m for 'n'm, ǧdr "he departed" for ǧd.

Provenance:
Al-ʿUdaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-ʿBāyḍā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there
are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-'Udaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry” (1868–1877: 144).

**Provenance:**
Al‘Udaysiyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-‘Udaysiyah. He writes: “Strictly speaking, the name al-‘Udaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-‘Udaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry” (1868–1877: 144).

He writes: “Strictly speaking, the name al-'Udaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins; one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayda. At Al-'Udaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry” (1868–1877: 144).

Riǧm Qaʿqūl, Rif Dimashq, Syria

[Latitude/Longitude: 32.9764 / 37.3136]

The name “Riǧm Qaʿqūl” was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rįgą Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rįgą Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rįgą Qaʿqūl". Note that the co-ordinates given here are very approximate.

By ʿbdy son of Ḥ

Provenance:
Rįgą Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rįgą Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rįgą Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rįgą Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. The name "Rijm Qa‘qūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruhba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qa‘qūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-‘Udaysiyyah to Rijm Qa‘qūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qa‘qūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qa‘qūl". Note that the co-ordinates given here are very approximate.

Rijm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rhuba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1186 (Vogüé 389 b)

l (m)ty bn s¹l bn mt ty bn *(l) y d---- f h gdʿwd s¹l(m) w l - h h mḥrt yrbb - h (w) dmy l - h s²m(t) w (h) lt l - ḫl w w̄k(s¹) w hrs w ḍg w ṣw l l mn ḫbl

By [Mty] son of S¹l son of Ṭy son of ---- and so O Gdʿwd [grant] security and to him [Mty] belongs the filly which he is training [and] (S²m [grant] the picture) for him and (0) Lt let there be indeed failure and loss and dumbness and lameness and blindness on whoever obscures [the drawing and inscription]

Apparatus Criticus:
C: s¹n for s¹l, yr---h w dmy f h s²m(s¹) "---- and he drew and O S²m(s¹)" for yrbb - h (w) dmy l - h s²m(t) "which he is training and drew for S²m t;"

Commentary:
The section of the text beginning f h gdʿwd is not connected to the section ending *(l) y d----, but runs parallel with it and it is impossible that it belongs to C 1187. The translation here of the section w l - h h mḥrt yrbb - h (w) dmy l - h s²m(t) was first proposed in Macdonald 1996: 74. There are other examples in Safaitic of asyndetic relative clauses following defined antecedents, a feature which also occurs in early Classical Arabic (Beeston 1970: 50, note 1). See Al-Jallad 2015: 188 for a discussion of this and other examples. For another inscription in which the author records that someone drew a picture for him see LP 325. Note that C 1188 which starts between the front legs of the camel and runs across C 1186 is by S²m bn Mdʾ and is probably the artist’s signature. The curse is one of the longest in the Safaitic inscriptions. The (ḥl) w ḍg (w ḍg) lt is entangled with the second bn of C 1188. On the asseverative l before ḫl see Al-Jallad 2015: 160–161. We would suggest that ḫl is the verbal noun of the IV (ṣʿaʿa) form of bALLa “he fell short of accomplishing what he ought to have done” (Lane 778c), though for another possibility see Al-Jallad 205: 320. Following Al-Jallad 2015: 352 we would take as w̄k(s¹) as meaning “loss”. The remaining afflictions are well attested in Safaitic.

Rūjm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rūjm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rūjm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rūjm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rūjm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rūjm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

l ḥṭn bn nh ---- bn lʾln bn ḥbk bn ms²(r)

By Ḥṭn son of Nh ---- son of Lʾln son of Ḥbk son of {Ms²(r)}

Apparatus Criticus:
C:ḥḥz for ḥbk

Provenance:
Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact
that while Waddington wrote that it was 10 minutes [ride] from al-'Udaisiyah to Rijm Qa‘qul, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qa‘qul "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qa‘qul". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co ordinates given here are very approximate.

By Ḥzm son of Flṭ

Provenance:
Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-Udāsīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

Rijm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-Udaysiyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as “Rijm Qaʿqūl”. Note that the co-ordinates given here are very approximate.

The name “Rijm Qaʿqūl” was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the “Rijm Qaʿqūl” copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from alʿUdaysīyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as “Rijm Qaʿqūl”. This helps to explain the curious fact that there is no overlapping between the "Riţm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riţm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riţm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riţm Qaʿqūl". Note that the co-ordinates given here are very approximate.

[Latitude/Longitude: 32.97958 / 37.32001]
The name "Riţm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riţm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riţm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. Provenance:

Riǧm Qaʿqūl, Rif Dimashq, Syria

[Latitude/Longitude: 32.97958 / 37.32001]

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruhba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-Uadaysyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

[Latitude/Longitude: 32.97958 / 37.32001]

The name "Riǧm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co-ordinates given here are very approximate.

This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Mader but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

Provenance:
Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]

The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. By lʿlm son of `wḍ

Provenance:
Riǧm ʿa[q]ūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name "Riǧm ʿa[q]ūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm ʿa[q]ūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm ʿa[q]ūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm ʿa[q]ūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm ʿa[q]ūl". Note that the co-ordinates given here are very approximate.

Zalaf (a) "Camp Krazinski", Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Corpus of Safaitic Inscriptions

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. The Safaitic Epigraphic Survey Programme in 1995 was unable to locate the camp which C calls “Camp Krazinski” (Zalaf (a)).

Provenance:
Zalaf (b) "Near the track leading to Ġabal Says" (C.p. 209), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ġabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ġabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover
a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which “track leading to Ġabal Says” the Dunands meant, or whereabouts near this track, they found these inscriptions.

Provenance:

Zalaf (b) "Near the track leading to Ġabal Says" (C p. 209), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which “track leading to Ġabal Says” the Dunands meant, or whereabouts near this track, they found these inscriptions.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa'qül, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ḥabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
Unfortunately, it is impossible at this stage to identify which "track leading to Ǧabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

C 1709 (Dunand 420 b)

Iṣnt bn mḥlm bn mḥlm bn nkf bn ʾsr

By Sʿnt son of Mḥlm son of Mḥlm son of Nkf son of Sʿr

Provenance:
Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā [?” (C p. 225), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riḡm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

By Gdn son of Slhm son of Bzyt son of N’m son of S’qtt

Apparatus Criticus:
C: b(k)yt for bzyt

Provenance:
Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā [?]" (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the “place near the larger khabrah”.

By Bln son of Tm son of Lmt

Provenance:
Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā [?]" (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names
Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riḡm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

\[ l \text{bd} \text{bn} \text{mnt} \text{bn} \text{hn}y \text{bn} \text{m}(s^r)k \text{bn} s^2\text{rb} \text{bn} \text{glmt} \text{w} \ h \lt \text{s}^3\text{lm} \text{m} \ -s^2\text{n}' \text{w} \text{nq't l-} \text{ywr} \text{h-} s^f \text{fr} \]

By bd son of Mtn son of Ḥny son of Ms^r k son of S^r rb son of Glmt and O Lt [grant] security against enemies and [inflict] ejection from the grave on whoever may scratch out the inscription

Provenance:
Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khhabrah kubrah [?]" (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

\[ l \text{hny } bn \text{ glm}t \ bn \text{ mtn} \ bn \text{ hny } bn \text{ ms}²\text{k} \ bn \text{ s}²\text{rb} \ bn \text{ glm}t \ bn \text{ bd} \ bn \text{ nff(r)}\ {\{b}\{n\}} \text{ ḫld w h} \text{ lt} \ (n)q{\prime}t \ w \text{ ḫr(s²)} \ (l- \{d\} \text{ y}\text{wr h-ḥtt}} \]

By Ḫny son of Ḡmlt son of Mtn son of Ḥny son of Ms²kb son of S²rb son of glmt son of bd son of \{Nfr\} \{son of\} ḫld and OLt [inflict] (ejection from the grave) and dumbness on (whoever) scratches out the carving

Provenance:

Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah ḱubrā [?" (C p. 225), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rįğm Qa'qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the “place near the larger khabrah”.

C 1907 (Dunand 525 b)

l rʿf bn (y)sʿd
By Rʿf son of ysʿd

Provenance:
Zalaf (d) “On the right of the track leading to the Ruḥbah” (C p. 249). Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāh, this is.

(p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūgīm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C. of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruhbah, this is.

C 1949 (Dunand 540 b)

lʾsʾwd bn bsʾkn(h)

By lʾsʾwd son of Bsʾknh

Provenance:
Zalaf (d) “On the right of the track leading to the Ruḥbāh” (C p. 249). Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāh, this is.

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

By ’d’m

Provenance:

Zalaf (d) "On the right of the track leading to the Rubbah" (C p. 249), Rif Dimashq, Syria
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riḡm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruhbāh, this is.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

C 2063 (Dunand 695 a)

l ṭrʾ bn kn h-ḏrḥ(h)

For ṭʾrʾ son of kn is this {grave}

Provenance:
Zalaf (d) "On the right of the track leading to the Ruḥbah" (C p. 249), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

Corpus of Safaitic inscriptions

I s²wd bn ----

By S²wd son of

Provenance:
Zalaf (d) "On the right of the track leading to the Ruḥbah" (C p. 249), Rif Dimashq, Syria

[Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

C 2113 (Dunand 716 a)

\[\text{l}\text{ʾ}nt \text{bn} \text{wrd} \text{bn} \{\text{n}m\} \text{bn} \text{khl} \text{bn} \{'m\} \text{ḍ} \text{ḥnt} \text{bn} \text{nḡbr} \text{w} \text{wgm} \text{l} \text{s}²\text{rk} \text{qtl} \text{w} \text{ḥl} \text{ḥy} \text{s}²\text{by} \text{w} \text{ḥl} \text{ḥnt} \text{m} \text{qtl} \text{w} \text{wr} \text{l} \text{ḥy} \text{wr} \text{ḥnt}\]

By ʾnt son of Wrd son of {n'm} son of Khl son of {m} of the lineage of Nḡbr and he grieved for S²rk, who was killed, and for ḭy, who was captured, and for {n'm}, who was killed, and may he who would efface this inscription go blind.

Provenance:
Zalaf (d) "On the right of the track leading to the Ruhbah" (C p. 249), Rif Dimashq, Syria
Latitude/Longitude: 32.9269 / 37.3296
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names
Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riqm Qa‘qul, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruhbāh, this is.

ls¹lk bn ms¹kʾl bn dʾy

By S¹lk son of Ms¹kʾl son of Dʾy

Provenance:
Zalaf (e) "On the right of the track leading to Damascus" (C p. 279), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa'qul, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

C 2184 (Dunand 1227 b)

l kṣṭt bn bnt

By Kṣṭ son of Bnt

Provenance:
Zalaf (e) "On the right of the track leading to Damascus" (C p. 279), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǰm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

C: 'yr “booty” for ('}yr “revenge”

**Provenance:**
Zalaf (e) "On the right of the track leading to Damascus" (C p. 279), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

Provenance:
Zalaf (f) "In the neighbourhood of Zalaf, on the west side of the track leading to Damascus " (C p. 291), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riqm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is not known whether the modern road which runs past Zalaf and al-Namārah follows the track mentioned here, or where to the east of it the inscriptions may have been found.

Provenance:
Zalaf (h) "Near the Roman road leading from al-Namārah to the Ruḥbah, on the east side" (C. p. 296), Rif Dimashq, Syria

[Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately]
750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Rūbah. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the road approximately 37.2962, northern end approximately 37.2951

C 2287 (Dunand 646 a)

l ygm' bn 'm w rdy ḡmn

By Ygm' son of 'm and O Rdy grant spoil

Provenance:
Zalaf (i) “Near the Roman road leading from al-Namārah to the Ruḥbah, on the west side” (C p. 298), Rif Dimashq, Syria

[Latitude/Longitude: 32.9035 / 37.2962]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m), C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riḡm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Ruḥbah. The road was first discovered by C.C. Graham (1858: 226 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Ruhbāh. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504

C (p. 199), following the Dunands, says that Zalafs is about 10 km south of Rjgm Qaʿqul, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Rubbah. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the road approximately 37.2962, northern end approximately 37.2951

Zalaf (j) *In the neighbourhood of Zalaf, near Wādī al-Shām * (C p. 304), Rīf Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2393 (Dunand 41)

l 'ḏ bn mks¹ bn s¹wr bn nqm bn s¹wr

By 'ḏ son of Mks¹ son of S¹wr son of Nqm son of S¹wr

Provenance:
Zalaf (j) “In the neighbourhood of Zalaf, near Wāḍī al-Shām” (C p. 304), Rif Dimashq, Syria

Latitude/Longitude: 32.9269 / 37.3296

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl,
but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīgm Qaʿqūl,
but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

l grm’l bn ’n(f)

By Grm’l son of ’n(f)

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
